

**St. PETER'S INSTITUTE OF HIGHER EDUCATION AND RESEARCH**

(Deemed to be University U/S 3 of the UGC Act, 1956)

Avadi, Chennai – 600 054.

# **BACHELOR OF ARCHITECTURE (B.Arch.)**

(I to X SEMESTERS)

**REGULATIONS AND SYLLABI**

**UNDER**

**CHOICE BASED CREDIT SYSTEM**

(REGULATIONS – 2020)

**ST. PETER'S SCHOOL OF ARCHITECTURE**

## **VISION OF THE DEPARTMENT**

To nurture and equip young minds, develop creative and competent architects endowed with intellectual disciplines, who aspire to create a sustainable built environment that responds to climate, context and the changing needs and aspirations of the society, fully able to meet the challenges of design and management of building projects.

## **MISSION OF THE DEPARTMENT**

Empowering individuals through a holistic and interdisciplinary approach to Architecture thereby creating professionals with a social conscience, environmental sensibility and a sense of social responsibility.

To establish the study of architecture as a foundation for life-long learning, career preparation, and a richer and contented life by developing communication skills and the ability to think critically, while promoting intellectual curiosity, aesthetic understanding, civic engagement, and appreciation of diversity.

# B.Arch. PROGRAMME

(Regulations 2020)

REGULATIONS AND SYLLABI UNDER CHOICE BASED CREDIT SYSTEM

(Effective from the Academic Year 2021 - 2022)

## 1. PROGRAMME EDUCATIONAL OBJECTIVES (PEOs)

- I. Become a practicing architect who can provide holistic and innovative solutions to needs and problems of society.
- II. Find gainful employment in architectural firms/ building sector and contribute in design and decision making.
- III. Be a part of organizations that influence policy and contribute to larger changes in society and environment.
- IV. Contribute to the discipline of architecture through higher studies, research and development.
- V. Become a thinker and entrepreneur who can direct creative vision, explorations, services and products towards a better future in an interconnected world.

## 2. PROGRAMME OUTCOMES (POs)

After going through the 5 years of study, our B.Arch. graduates will exhibit to:

PO#	Graduate Attribute	Programme Outcomes
1	Analysis and Design Skill	Analyze and design architectural projects of all scales in a competent, innovative and appropriate manner as the situation
2	Understanding of Form and Architecture	Represent, understand and analyze forms and attributes of architecture in different ways (manual/ graphic/ diagrammatic/ digital means) so as to inform the architectural design process.
3	Ability for Cognition, Expression and Communication	Understand situations through experience and express ideas through various modes- reading, writing, speaking, art, cognitive mapping, etc., that are consistent with the self and the world.
4	Historical, Social and Cultural Awareness	Identify/ analyze/ understand with sensitivity the various cultural, social and historical aspects of architecture as well as make meaningful and contextual design decisions.
5	Critical and Creative Thinking	Critically understand/ theorize existing situations and make positive creative transformations towards the future.
6	Knowledge in Making of Building	Understand and contribute to constructional aspects of buildings involving material strength and choice, building component and structural design.
7	Support and Services to Buildings	Understand and work out basic and advanced services for a building in an optimal manner so as to enhance the quality of life
8	Environment and Physical Context	Understand the relationships between environment and architecture and design livable buildings that are sensitive to as well as tap the potential of the environment at different
9	Skill in Building analysis and Optimization of Design	Calculate/analyze building costs and environmental performance and optimize design for varied criteria.
10	Profession and Ethics	Serve as a competent and ethical professional architect.
11	Life Long Learning, Research and Development	Understand and address specific aspects of the discipline of architecture in depth through rigorous exploratory and experimental studies and research.
12	Larger contribution to Society	Understand broader interdisciplinary connections with architecture and engage them to serve as a catalyst for positive change.

### 3. PROGRAMME SPECIFIC OUTCOMES (PSOs)

PSO#	Programme Specific Outcomes
1	To nurture individuals towards a better understanding of learning methods to bridge gap between theory and practice.
2	To respond to innovative needs environmental and social responsibility that one should acquire towards excellence in the field both in academics and practice.
3	To develop a culture of enquiry, a thirst to excel in a particular field of knowledge and an ability to have a broad-minded perspective to things.
4	To nurture an intent to unlearn and reinterpreted learning's through the change, proceeding towards efficient and sustainable response to varied situations.

### 4. MAPPING OF PEO / PO MAPPING:

PROGRAMME EDUCATIONAL OBJECTIVES	PROGRAMME OUTCOMES											
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
I	3	3	2	3	3	3	3	3	3	3	2	3
II	2					2	2	2	2	3		
III				2	3			3				3
IV		2	1	3	2						3	
V			1	1	3			2			2	3

## 5. MAPPING OF COURSE OUTCOME AND PROGRAMME OUTCOME:

Year	Sem	Course Name	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
I	1	Mathematics		2				3				2

5	SEC	2		-	3							5
	<b>Total</b>	21	33	32	33	31	37	33	16	42	26	280

**1. Eligibility:** Candidates who passed an examination at the end of the 10+2 scheme of examination with at least 50% aggregate marks in Physics, Chemistry & Mathematics and also at least 50% marks in aggregate of the 10+2 level examination or passed 10+3 Diploma Examination with Mathematics as compulsory subject with at least 50% marks in aggregate (with effect from the Academic year 2019-20 as per the Gazette Notification in respect of CoA dated 13<sup>th</sup> February, 2019)

**and**

who passed National Aptitude Test in Architecture (NATA) administered by the Council of Architecture are eligible for admission to I year of 5-year B.Arch. Degree programme.

**2. Duration:** Five Years comprising 10 Semesters. Each semester has a minimum 90 working days with a minimum of 5 hours a day. Candidates who have completed the duration of the programme of study are permitted to appear for the arrear subjects' examinations, if any within two years after the duration of the programme.

**3. Medium:** English is the medium of instruction and examination.

**4. Weightage for Continuous and End Assessment:** The weightage for Continuous Assessment (CA) and End Assessment (EA) is 40:60 for theory courses and 50:50 for Studio Courses unless the ratio is specifically mentioned in the Scheme of Examinations. The Question Paper is to be set for a maximum of 100 Marks.

**5. Choice Based Credit System:** Choice Based Credit System is followed with one credit equivalent to one hour for a theory paper and two hours for a practical per week in a cycle of 18 weeks (that is, one credit is equal to 18 hours for each theory paper and one credit is equal to 36 hours for a practical in a semester) in the Time Table. The total credit for the programme (10 semesters) is 280.

**6. Passing Requirements:** The minimum pass mark (raw score) be 50% in End Assessment (EA) and 50% in Continuous Assessment (CA) and End Assessment (EA) put together. No minimum mark (raw score) in Continuous Assessment (CA) is prescribed unless it is specifically mentioned.

**7. Grading System:** Grading System on a 10 Point Scale is followed with 1 mark = 0.1 Grade point to successful candidates as given below.

## CONVERSION TABLE

(1 Mark = 0.1 Grade Point on a 10 Point Scale)

Range of Marks	Grade Point	Letter Grade	Classification
90 to 100	9.0 to 10.0	O	First Class
80 to 89	8.0 to 8.9	A	First Class
70 to 79	7.0 to 7.9	B	First Class
60 to 69	6.0 to 6.9	C	First Class
50 to 59	5.0 to 5.9	D	Second Class
0 to 49	0 to 4.9	<b>F</b>	<b>Reappearance</b>

### Procedure for Calculation

Cumulative Grade Point Average (CGPA)	= $\frac{\text{Sum of Weighted Grade Points}}{\text{Total Credits}}$
	= $\frac{\sum (CA+EA) C}{\sum C}$
Where Weighted Grade Points in each Course	= Grade Points (CA+EA) multiplied by Credits
	= (CA+EA)C
Weighted Cumulative Percentage of Marks(WCPM)	= CGPAx10

C- Credit,

CA-Continuous Assessment,

EA- End Assessment

## CURRICULUM DESIGN GUIDELINES

Course Code pattern for Theory courses

**Part A:** 10 questions (with equal distribution to all units in the syllabus).  
Each question carries 2 marks.

**Part B:** 5 questions with either or type (with equal distribution to all units in the syllabus). Each question carries 8 marks.

- (b) **Assessment of Studio Courses:** Portfolio examined through a viva voce Examination by one internal faculty and one external faculty appointed by CoE.
- (c) **Assessment of Educational Tour:** Students are taken to a tour to various historic and architectural buildings present either North India or South India to provide practical and experimental learning that compliments the syllabus. No Examination is conducted and the 2 Credits can be awarded directly to the student.
- (d) **Assessment of Architectural Thesis:** Every candidate shall submit at the end of the X Semester a thesis on a subject approved by the Thesis Review Committee constituted by the Head of the department which shall comprise of the Head of the Department/ Thesis Coordinator, supervisor of thesis and two external architects. The thesis shall be evaluated for a weightage of 60% of the total marks by the review committee through continuous internal assessment with a minimum of 5 reviews with equal weightage for each review.

For the X Semester Architectural thesis, the end semester viva – voce examination will be conducted by a panel of two external examiners (including Practising Architects) appointed by the CoE who shall each award 50% of the marks allocated for Viva Voce Examination. The head of Department /Thesis Coordinator and the Supervisor of the thesis shall be present for the viva voce examination.

**(e) Assessment of Practical Training:**

- (i) Every candidate shall undergo practical training in the IX Semester
- (ii) Every candidate is required to undertake the entire duration of practical training.
- (iii) Continuous assessment for Practical Training shall be done for a weightage of 50% of the total marks out of which 80% of the marks will be assigned by the practicing architect in whose office the candidate is undergoing training. The principal Architect will give three assessments in each semester as per the academic schedule of the University and 20% will be awarded by the coordinator(s) of the practical training for the submitted portfolio of works at the end of the Semester.
- (iv) Practical Training shall commence on the reopening day of the IX semester and conclude on the last working day of that semester as per the academic schedule of the Institute.
- (v) Final Portfolio will be examined through a viva voce Examination by one internal faculty & one external examiner appointed by CoE at the end of IX semester.

**8. Effective Period of Operation for the Arrear Candidates:** Three Years grace period is provided for the candidates to complete the arrear examination, if any.

**Registrar**

## SYLLABUS

AMAT1111	MATHEMATICS	L	T	P/S	C	Total Marks
		2	2	0	4	100

### COURSE OBJECTIVES

- Identifying practical problems to obtain solutions involving trigonometric and exponential functions.
- Studying the properties of lines and planes in space, along with sphere and providing a tool too.
- Understand 3D material.
- Understand functions of more than one variable, along with differentiation under integral sign.
- Solving differential equation of certain type.
- Analyzing data collection and interpretation of results using statistical tools.

#### Unit - 1 TRIGONOMETRY AND MENSURATION 9 hrs.

Use of Mathematics in Architecture with Examples. Trigonometric (sine, cosine and tan functions) and exponential functions, De-Moivre's theorem. Area of plane figures, computation of volume of solid figures.

#### Unit - 2 THREE-DIMENSIONAL ANALYTICAL GEOMETRY 9 hrs.

Direction cosines and ratio's – Angle between two lines – Equations of a plane – Equations of a straight line – Coplanar lines – Shortest distance between skew lines – Sphere – Tangent plane – Plane section of a sphere.

#### Unit - 3 INTEGRATION AND FUNCTIONS OF TWO VARIABLES 9 hrs.

Integration of rational, trigonometric and irrational functions, properties of definite integrals, Reductions formulae for trigonometric functions, Taylor's Theorem - Maxima and Minima (Simple Problems).

#### Unit - 4 ORDINARY DIFFERENTIAL EQUATIONS 9 hrs.

Linear equations of second order with constant coefficients – Simultaneous first order linear equations with constant coefficients – Homogeneous equation of Euler type – Equations reducible to homogeneous form.

Study Examples : Study of Eiffel tower Differential Equation, Heat Loss building Calculation

#### Unit - 5 BASIC STATISTICS AND PROBABILITY 9 hrs.

The arithmetic mean, median, mode, standard deviation and variance - Regression and correlation - Elementary probability - Laws of addition and multiplication of probabilities - Conditional probability – Independent events.

**Total: 45 Periods / Hours**

## **COURSE OUTCOMES:**

On completion of the course the student will be able to

- CO1. Relate the mathematical trigonometric concepts to the development of architectural concepts and design elements
- CO2. Relate the application of analytical geometry in the architectural practice for element property analysis, site surveying & planning, setting out design on site and area calculations of various shapes & planes.
- CO3. Understand the application of integration and functions of two variables in architecture.
- CO4. Understand the application of differential equations in the design of famous architectural marvels
- CO5. Understand the application of statistics and probability in the project management of architectural projects

<b>AART1101</b>	<b>HISTORY OF ARCHITECTURE &amp; CULTURE - I</b>	<b>L</b>	<b>T</b>	<b>P/S</b>	<b>C</b>	<b>Total Marks</b>
		<b>1</b>	<b>2</b>	<b>0</b>	<b>3</b>	<b>100</b>

### **COURSE OBJECTIVE**

- To give an overall understanding of the architecture in India up to the colonial period as parallel and sequential productions rising from the cumulative effect of forces operating and intersecting in the Indian subcontinent.
- To inform about specific and prominent modes of architecture in terms of evolution, function, morphology and character.
- To give exposure to works that are architecturally exemplary and/or representative.
- To appreciate architecture as giver of particular and universal meaning.

#### **Unit - 1 EARLY INDIA AND ITS CULTURAL PRODUCTIONS 10 hrs.**

Overview of early history of the Indian subcontinent bringing out different conjectures. Indus Valley Civilisation and its society, culture and urbanism. Vedic culture, settlements and architecture through textual and inscriptional sources as well as conjectures. Outline of textual sources related to architecture and town planning in ancient India. Political, religious and cultural history of India in the first millennium outlining various empires.

Evolution of Hinduism, Buddhism and Jainism. Interrelationships among them and timelines. Architecture of early Mauryan empire. Buddhist architecture and art. Stupas, chaitya halls and viharas. Hindu temple form – principles, morphology, meaning, symbolism, iconography and rituals, classification. Early Hindu temple architecture and rock cut architecture of Guptas, Chalukyas and Pallavas. Influence of Buddhist architecture on them.

Study of important monuments for all the above.

#### **Unit - 2 ARCHITECTURE OF SOUTHERN INDIA 10 hrs.**

Outline history of South India with particular emphasis on Bhakthi movement and evolution of temple town urbanism and architecture.

Art and architecture under the Pallavas, Cholas, Pandyas, Nayaks and Vijayanagara kingdom with specific focus on Hindu temple architecture. Influence of social and political history on them. Hoysala architecture.

Study of important monuments for all the above.

#### **Unit - 3 ARCHITECTURE OF NORTHERN INDIA 7 hrs.**

Architecture of Gujarat, Orissa, Madhya Pradesh and Rajasthan with specific focus on Hindu temple architecture.

Architecture of step wells in Northern India and their socio-cultural importance.

Study of important monuments for all the above.

#### **Unit - 4 INTRODUCTION TO ISLAMIC ARCHITECTURE AND EARLY ISLAMIC ARCHITECTURE IN INDIA 9 hrs.**

Brief history of Islam. Islamic architecture of the world as rising from Islam as a socio-cultural and political phenomenon. Early political history of Islam in India. Evolution of building types

in terms of forms and functions. Principles and characteristics of Islamic architecture - to include aspects of religion, geometry, structure, materials, decoration, light.

Early Islamic architecture of Punjab. Evolution of Islamic architecture under the Delhi Sultanate - Slave, Khaji, Tughlaq, Sayyid and Lodi dynasties.

Study of important monuments for all the above.

#### **Unit - 5 REGIONAL ISLAMIC ARCHITECTURE, MUGHAL ARCHITECTURE AND AFTER IN INDIA 9 hrs.**

Political History of the Mughals. Spread of Islam into other regions of India and their architectural expressions - Gujarat, Bengal, Malwa and the Deccan. Study of important monuments for all the above.

Mughal architecture and urbanism under Humayun, Akbar, Shahjahan and Aurangzeb. Outline of Post Mughal Islamic architecture. Study of important monuments for all the above.

Outline of architecture and study of important monuments related to Islam in Tamil Nadu.

**Total: 45 Periods / Hours**

#### **COURSE OUTCOMES:**

On completion of the course the student will have acquired

- CO1. An understanding of the diversity of architecture in India and sensitivity towards its syncretic aspects.
- CO2. The ability to appreciate particular cultural, symbolic, spatial and material qualities in architecture and cities as givers of meaning and continuity
- CO3. The ability to appreciate universal qualities of architecture and their effects.

## **COURSE OUTCOMES:**

On completion of the course the student will have acquired

- CO1.** An understanding on the concepts of architectural drawing as well as representation skills
- CO2.** An understanding on the building representation in 2D and 3D among students in addition to preparation of measured drawing.

<b>AART1103</b>	<b>COMMUNICATION ENGLISH</b>	<b>L</b>	<b>T</b>	<b>P/S</b>	<b>C</b>	<b>Total Marks</b>
		<b>1</b>	<b>0</b>	<b>1</b>	<b>2</b>	<b>100</b>

### **COURSE OBJECTIVES**

- Enhance communication skills in English by developing their listening, speaking, reading and writing skills.
- Develop their speaking skills with specific reference to prospective/actual clients, suppliers, business partners and colleagues.
- Enhance their reading particularly, rules and regulations, catalogues, architecture journals and textbooks.
- Develop their writing skills especially writing emails, proposals and reports.

#### **Unit - 1 INTRODUCTION 10 hrs.**

Listening- short talks, interviews and discussions from various media Speaking-negotiating meaning, convincing people- describing places- Reading- texts on architecture-Writing- process descriptions -Vocabulary Development-Abbreviations and Acronyms. Grammar- Suitable tenses to write descriptions and describe.

#### **Unit - 2 SPEAKING, READING AND WRITING 10 hrs.**

Listening –listen to talks for specific information- Speaking- Speaking- preparing a presentation using the computer, participating in small group discussion- Reading- lengthy articles related to architecture and construction Writing- writing formal emails, vocabulary- appropriate words to describe topics in architecture, Grammar- suitable grammar for writing a report.

#### **Unit - 3 DESCRIPTIVE PRESENTATION 7 hrs.**

Listening- Descriptions of place, conversations and answering questions, Speaking- making a power point presentation on a given topic, Reading- architecture manuals, Writing- writing a report, writing essays-descriptive essays, Vocabulary- adjectives of comparison, Grammar- collocations

#### **Unit - 4 ANALYTICAL PRESENTATION 9 hrs.**

Listening- TED talks, Speaking- participating in group discussions, Reading- reading and interpreting visual information, Writing- writing analytical essays and argumentative, Vocabulary- suitable words to be used in analytical and argumentative essays, Grammar- subject-verb agreement.

#### **Unit - 5 PROJECT PROPOSAL PRESENTATION 9 hrs.**

Listening- ink talks and longer talks, Speaking- talking about one's project proposal, Reading- reading essays on construction, buildings, different schools of architecture, Writing- writing proposals, Vocabulary- related vocabulary, Grammar- Cohesive devices.

**Total: 45 Periods / Hours**

## **COURSE OUTCOMES:**

On completion of the course the student will have acquired

- CO1. Speak convincingly, express their opinions clearly, initiate a discussion, negotiate, and argue using appropriate communicative strategies.
- CO2. Read different genres of texts, infer implied meanings and critically analyze and evaluate them for ideas as well as for method of presentation.
  
- CO3. Listen/view and comprehend different spoken excerpts critically and infer unspoken and implied meanings.
- CO4. Write effectively and persuasively and produce different types of writing such as narration, description, exposition and argument as well as creative, critical, analytical and evaluative writing.

<b>AARP1101</b>	<b>ART STUDIO</b>	<b>L</b>	<b>T</b>	<b>P/S</b>	<b>C</b>	<b>Total Marks</b>
		<b>1</b>	<b>0</b>	<b>2</b>	<b>3</b>	<b>100</b>

### **COURSE OBJECTIVE**

- To develop presentation skills, visual expression and representation, imaginative thinking and creativity through a hands on working with various mediums and materials.
- To familiarize the students with the various mediums and techniques of art through which artistic expression can be achieved
- To involve students in a series of exercises which will look at graphic and abstract representations of art
- To sensitize students to the grammar of visual perception by involving them in a series of free hand exercises to understand form, proportion, scale, figure ground etc.,

#### **Unit - 1      BASICS OF DRAWING      6 hrs.**

Introduction to Drawing through various period of History - Seeing (Observation / Proposition / Scale / Texture through study of still life and natural objects), Visualizing (Memory Drawing / Exploratory Drawing), Expressing (Qualities of Lines / Drawing tools and Quality of Expressions – Pen, Pencil, Charcoal, Marker) – Abstraction and communication (Sketching and Free hand perspective Drawing)

#### **Unit - 2      DRAWING FROM OBSERVATION      6 hrs.**

The processes of seeing, Imagining and Representing - Observations on Line and Shape - Observation on Tone and Texture - Observations on Form and Structure - Observations on Space and Depth - Sketching Exercises related to the contents specified above.

#### **Unit - 3      GRAPHIC DESIGN      6 hrs.**

Introduction to history of Graphic Design – Visual perception theory (Gestalts) – Principle of Compositions – Colour Theory – Type Design and Typography (Layouts / Format / Calligraphy) – Environmental Graphics (Signage / Logo / enhancing the built environment) – Exercises in environmental graphic design, color and composition.

#### **Unit - 4      PAINTING      6 hrs.**

Introduction to Art / Artists' / Movements and Styles before and after industrial revolution and its implication on design and architecture – Mediums, Techniques and Tools (Water colours / Posters / Acrylic / Inks / Brushes / Knives / Mixed Media) - Exercises using various techniques and mediums.

#### **Unit - 5      CULTURE - CRAFT - TECHNOLOGY      6 hrs.**

Understanding Culture and Craft – Understanding Craft and Technology – Material exploration (Wood / Metal / Clay / Printing) - to be Explored as Workshop Modules - Print Making / Wood Carving / Clay Sculpting / Casting / Sheet Metal etc.

**Total: 45 Periods / Hours**

## **COURSE OUTCOMES:**

On completion of the course the student will have acquired

- C01.** Exposure to various mediums, techniques and tools.
- C02.** Mastery in sketching, visualizing and expression through manual drawing, sensitized to culture, craft and context.
- C03.** Skill in Handling Materials and in Making Products.

## **TEXT / REFERENCE BOOKS**

<b>AARP1102</b>	<b>BASIC DESIGN</b>	<b>L</b>	<b>T</b>	<b>P/S</b>	<b>C</b>	<b>Total Marks</b>
		<b>5</b>	<b>0</b>	<b>10</b>	<b>15</b>	<b>100</b>

### **COURSE OBJECTIVE**

- To understand the elements and principles of Basic Design as the building blocks of creative design through exercises that will develop originality, expression, skill and creative thinking.
- To involve students in a number of exercises to understand the grammar of Design and Visual composition.
- To enable the understanding of 3D Composition by involving students in a number of exercises which will help generation of a form from a two dimensional / abstract idea.
- To understand architecture as a craft, of making and of putting together.
- To sensitize students to materials both planar and plastics and Processes involved in working with them.
- To draw inspiration and clues from nature.
- To introduce Drawing as an analytical tool.
- To introduce students to History of Design and craft.

### **UNIT - 1                    ELEMENTS OF DESIGN & SPATIAL DESIGN                    30 hrs.**

Introduction to Spatial Design, Form and Structures through Basic Design – Elements of Design: Properties, qualities and characteristics of point, line, direction shape, form, colour and texture. Seminars and Creative workshops that are aimed at teaching, Elements and Principles of Visual Composition and Pattern making

Exercises involving the above in the form of Design studios

### **UNIT - 2                    PRINCIPLES OF DESIGN:                    45 hrs.**

Principles of Design: Scale, Proportion, Balance, Harmony, Rhythm and Contrast. Seminars and Creative workshops that are aimed at exploring massing theories of additive & subtractive forms and their application in a Visual composition Exercises involving the above in the form of Design studios.

Seminars and Creative workshops that are aimed at exploring Colour theories and their application in a Visual composition Exercises involving the above in the form of Design studios.

### **UNIT - 3                    CONCEPTS OF VISUAL PERCEPTION                    45 hrs.**

Concepts of Visual perception: Study of texture and schemes of texture both applied and stimulated and their application.

Material and Form / Structures – Nature based enquiry into form both Linear and Planar, fluid and plastic forms using simple material like Mount Board, metal foil, box boards, wire string, thermocol, clay, plaster of Paris etc.

Study of Solids and voids to evolve sculptural forms and spaces using specific process-oriented methods like casting, mouldings etc.

## UNIT - 4 ANALYTICAL APPRAISAL OF DESIGN

30 hrs.

Analytical appraisal of an iconic Design like a rietvelt chair, Eames chair etc., for form, function, visual characteristics, ergonomics etc. /evolution of a craft.

Analytical appraisal of building form in terms of visual character, form and function, play of light and shade, solids and voids, colors and texture.

**Total: 150 Periods / Hours**

### COURSE OUTCOMES:

On completion of the course the student will have acquired

- CO1. An understanding of the qualities of different elements as well as their composite fusions.
- CO2. An ability to engage and combine the elements of design in spontaneous as well as intentional ways in order to create desired qualities and effects.
- CO3. Required skills – observation / analysis / abstractions / interpretation / representations / expressions through models and drawings.
- CO4. Understanding by making.

## II SEMESTER

AART1104	MECHANICS OF STRUCTURES I	L	T	P/S	C	Total Marks
		2	2	0	4	100

### COURSE OBJECTIVES

- To make students aware of how structural resolutions are important in realization of architectural design concept. At this stage, students shall be exposed to forces, moments, and resolution of forces.
- To make the students understand basic properties of solids and sections which influence their behavior under the effect of various types of forces.

#### **Unit - 1 FORCES AND STRUCTURAL SYSTEMS 9 hrs.**

Principles of statics – Forces and their effects-Types of force systems - Resultant of concurrent and parallel forces – Lami’s theorem – principle of moments – Varignon’s theorem – principle of equilibrium – Types of supports and loadings – Determination of reactions for simply supported beams = simple problems.

#### **Unit - 2 ANALYSIS OF PLANE TRUSSES 6 hrs.**

Analysis of plane trusses - Introduction to Determinate and Indeterminate plane trusses - Analysis of simply supported and cantilevered trusses by method of joints and method of sections.

#### **Unit - 3 PROPERTIES OF SECTION 10 hrs.**

Properties of section – Centroid – Moment of Inertia – Section modulus – Radius of gyration – Theorem of perpendicular axis – Theorem of parallel axis – simple problems.

#### **Unit - 4 ELASTIC PROPERTIES OF SOLIDS 12 hrs.**

Elastic properties of solids –concept of stress and strain –deformation of axially loaded simple bars-types of stresses- Concept of axial and volumetric stresses and strains (excluding composite bar).

#### **Unit - 5 ELASTIC CONSTANTS 8 hrs.**

Elastic constants – Elastic Modulus – Shear Modulus – Bulk Modulus – Poisson’s ratio – Relation between elastic constants – Application to problems.

**Total: 45 Periods / Hours**

### COURSE OUTCOMES:

On completion of the course the student will be able to

- CO1. Apply the concepts of action of forces on a body.
- CO2. To apply the equilibrium concepts.
- CO3. Understand the basic geometric properties and the behavior of materials under the effect of forces.

<b>AART1105</b>	<b>THEORY OF ARCHITECTURE</b>	<b>L</b>	<b>T</b>	<b>P/S</b>	<b>C</b>	<b>Total Marks</b>
		<b>1</b>	<b>2</b>	<b>0</b>	<b>3</b>	<b>100</b>

## **COURSE OBJECTIVES**

- To understand that architecture is a dynamic interface between man and his environment: through its constituent aspects and elements.
- To understand the various principles of architectural design, with which the above objective is attained.
- To understand that architecture is communicative medium involving aspects of expression and experience.
- To understand the various possibilities of approaching architectural design, through examples from historical and contemporary examples.

### **Unit - 1 ARCHITECTURE – ITS ELEMENTS 6 hrs.**

Defining Architecture; an overview of the complexities of various layers and factors involved in Architecture. - Architecture as an organic entity and its components - function, form, structure, skin, material, circulation, character etc. - Architecture as a building entity and its elements - floor, walls, columns, roof, openings, stairs, etc; - their definition, evolution, attributes and spatial roles - Form/space making and its elements - points, lines, planes and volume; Various configuration of these elements in space making.

### **Unit - 2 NATURE AND MAN – ARCHITECTURE AS AN INTERFACE 6 hrs.**

Nature - its five basic elements - earth (material, site, vegetation etc), water (rain, humidity etc), fire (light, temperature, radiation), wind (ventilation), sky (space); The dynamic interactions between elements of nature and elements of architecture - Human being – the five basic senses - their role in perception of built environment - vision (light, color, views etc), hearing (sound, noise, silence), tactility (texture, thermal and physical feeling), smell, spiritual. The Functional, psychological and aesthetic relevance in architecture - The demonstration of architecture as an experiential interface between human senses and his environment explained with relevant Architectural examples. Case studies of relevant architectural examples and exercises.

### **Unit - 3 ARCHITECTURAL DESIGN - ITS PRINCIPLES 12 hrs.**

Introduction to Design; A brief overview of design and its principles in other fields. (Arts, crafts, nature etc); Architectural design - its tools (elements), objectives (experience and expression) and means (principles) - Principles of Design - proportion, scale, order, repetition, rhythm, harmony, balance, emphasis, hierarchy, symmetry, axis, datum etc. Creative exercises to assimilate all the principles of design. Application of design principles at various levels – site level, building level and detail level – Evolution of architectural form - Basic 3d forms, Transformation of form, principles involved – space, spatial relationships and spatial organization, principles involved.

Relevant examples from modern and traditional architecture. Case studies of relevant modern and traditional architectural examples and creative exercises to understand the principles of transformation.

**Unit - 4      EXPRESSION AND EXPERIENCE IN ARCHITECTURE                      9 hrs.**

Architecture as an expressive medium, semiotics involved in various elements, aspects, and principles of architecture. Examples of spatial narratives – Experiencing architecture – Aspects influencing the experience and expression – place, people, society, culture, history, tradition, time etc.

Creative seminars, workshops & case studies through works of architects.

**Unit - 5      CONCEPTS IN ARCHITECTURE    12 hrs.**

Conceptualizing architecture, various approaches – Understanding Concepts behind the various architectural manifestations in relevant traditional, historical, vernacular examples in the context of the India and West world.

Understanding Concepts, ideas, philosophy behind the works of few architects choosing from the modern, post modern and contemporary periods in the context of the India and West world.

**Total: 45 Periods / Hours**

**COURSE OUTCOMES:**

On completion of the course the student will have

- CO1.      A thorough understanding on the definition of architecture; elements of architectures of form.
- CO2.      An exposure to the principles of architecture and applications of the same in buildings and spaces.
- CO3.      An understanding the meaning of character and style of buildings with examples.
- CO4.      An exposure to students on ideologies and philosophies of architectures of contemporary.
- CO5.      An exposure to analysis and experience of architecture through case studies and architects through examples.

<b>AART1108</b>	<b>SUSTAINABLE SERVICES &amp; GREEN BUILDINGS</b>	<b>L</b>	<b>T</b>	<b>P/S</b>	<b>C</b>	<b>Total Marks</b>
		<b>1</b>	<b>2</b>	<b>0</b>	<b>3</b>	<b>100</b>

### **COURSE OBJECTIVE**

- To develop an advanced understanding of sustainability through exposure to resource conservation strategies as well as and their integration and management at the building and large development level.

#### **Unit - 1 RESOURCE MANAGEMENT 6 hrs.**

Energy, water, and waste audits; operations and maintenance; post occupancy surveys and reviews; building benchmarking.

#### **Unit - 2 SUSTAINABILITY 6 hrs.**

Social, economic and environmental impacts; sustainable systems and utilities; their integration and management at building and site levels, introduction to smart cities.

#### **Unit - 3 GREEN RATINGS 12 hrs.**

Sustainability rating criteria and checklists; documentation for design credits; toolkits and compliance checks and forms; concept stage energy modelling and simulation.

### **TEXT / REFERENCE BOOKS**

<b>AART1206</b>	<b>ARCHITECTURAL DRAWING II</b>	<b>L</b>	<b>T</b>	<b>P/S</b>	<b>C</b>	<b>Total Marks</b>
		<b>1</b>	<b>0</b>	<b>1</b>	<b>2</b>	<b>100</b>

## **COURSE OBJECTIVES**

- To involve students in a number of exercises that will help them develop the skill of representation in advance drawing techniques involving perspective and sciography.
- To involve students in a number of exercises that will help to understand the measured drawing method to document buildings of architectural interest using simple and advance techniques of representation.

### **Unit - 1 PERSPECTIVE METHODS 9 hrs.**

Introduction to the concept of perspective drawing. One point and two-point perspective of simple geometrical shapes like cube, prism, combination of shapes using picture plane method and measuring point method. Introduction to three-point perspective.

### **Unit - 2 PERSPECTIVE: BUILDING INTERIOR 9 hrs.**

Construction of one, two and three-point perspective grids - Construction of one- and two-point perspective of building interiors. Understanding the basic human proportion and scale.

Adding of human figures, planters, furniture etc. in an interior perspective scene. Basic applications of shade and shadows and rendering techniques.

### **Unit - 3 PERSPECTIVE: BUILDING EXTERIOR 9 hrs.**

Principles of shade and shadow – construction of shadow of simple geometrical shapes – construction of sciography on building, shadows of architectural elements.

Introduction to short cut perspective method. Construction of one-, two- and three-point perspective of building exterior. Adding of human figures, trees etc., Application of light and shadow and rendering techniques of building materials.

### **Unit - 4 MEASURED DRAWING: HISTORIC DOCUMENT STUDY 9 hrs.**

Documentation and drawing of a simple historic building along with the relevant study of the building based on its history, morphology and context. Measured drawing using pen and ink rendering technique.

### **Unit - 5 MEASURED DRAWING: BUILDING DOCUMENTATION 9 hrs.**

Complete documentation of a building of special interest in terms of building construction, architectural excellence or technology using photographs, tapes etc. Measured drawing of plans, elevations, sections, isometric projections of building details etc. using pen and ink rendering technique.

## **COURSE OUTCOMES:**

On completion of the course the student will have

- C01. Ability to construct the 3d views and perspective drawings of the buildings.
- C02. Understanding of advanced documentation and measured drawing techniques

<b>AART1207</b>	<b>BUILDING MATERIALS AND CONSTRUCTION – I</b>	<b>L</b>	<b>T</b>	<b>P/S</b>	<b>C</b>	<b>Total Marks</b>
		<b>1</b>	<b>0</b>	<b>2</b>	<b>3</b>	<b>100</b>

### **COURSE OBJECTIVES**

- To have an understanding of the properties, characteristics, strength and application of naturally occurring building materials such as Stone, Bamboo, Lime and Mud.
- To study the principles of designing components of load bearing structures – foundation, plinth, wall, openings etc. with naturally occurring building materials.

#### **Unit - 1 BUILDING MATERIALS 6 hrs.**

Introduction to Building materials – Naturally occurring building materials such as Stone, Bamboo, Lime and Mud – Characteristics and Applications.

#### **Unit - 2 BUILDING COMPONENTS – 01 – FOUNDATIONS 6 hrs.**

Introduction to Building Components – Foundations – Foundations suitable for construction with stone, bamboo, lime and mud – Exercises on Foundations in History and Today’s context.

Construction drawing plates comprising of technical plan, elevation and section along with sketches and details showing method of construction.

#### **Unit - 3 BUILDING COMPONENTS – 02 - WALLS 12 hrs.**

Introduction to Building Components – Walls – Walls suitable for construction with stone, bamboo, lime and mud – Exercises on Walls in History and Today’s context.

Construction drawing plates comprising of technical plan, elevation and section along with sketches and details showing method of construction.

#### **Unit - 4 BUILDING COMPONENTS – 03 – OPENINGS / 9 hrs. FENESTRATIONS**

Introduction to Building Components – Openings – Openings/Fenestrations suitable for construction with stone, bamboo, lime and mud – Exercises on Openings / Fenestrations in History and Today’s context.

Construction drawing plates comprising of technical plan, elevation and section along with sketches and details showing method of construction.

#### **Unit - 5 FINISHES 12 hrs.**

Introduction to Finishes – Paints, Plastering, Glazes and Varnishes – Exercises on different finishes in History and Today’s context for building components with stone, bamboo, lime and mud – Market survey of Paints, Plastering materials, Glazes and Varnishes. Exercises on finishes in History & Today’s context

Construction drawing plates comprising of technical plan, elevation and section along with sketches and details showing method of construction.

**Total: 45 Periods / Hours**

## **COURSE OUTCOMES:**

On completion of the course the student will

- C01. Have knowledge of construction details using naturally occurring building materials such as stone, bamboo, mud and lime through drawing as well as doing a literature or live case study.
- C02. Be able to create drawing plates comprising of technical plan, elevation and section along with sketches and details showing method of construction.

<b>AARP1103</b>	<b>MODEL MAKING AND ARCHITECTURAL DELINEATION</b>	<b>L</b>	<b>T</b>	<b>P/S</b>	<b>C</b>	<b>Total Marks</b>
		<b>1</b>	<b>0</b>	<b>2</b>	<b>3</b>	<b>100</b>

## **COURSE OBJECTIVES**

- To introduce students to analytical and illustrative drawing techniques as tools in the materialization and expression of thoughts.
- To introduce model making as a generative process, a tool in Design generation.
- To inculcate the dynamic act of constructing in thinking process.
- To understand the challenges of proper craftsmanship.

### **Unit - 1 LINE, RENDER AND MIXED MEDIA 6 hrs.**

Free hand sketching in architectural representation- pen, charcoal, ink, water colour, paints, mixed media, collages, line cutting, print making as tools.

Creative assignments that require study, analysis, documentation with weightage given to representational expression and techniques.

### **Unit - 2 DIAGRAMMING 6 hrs.**

Conceptual sketches - Plan, section, elevation, perspectives, isometric / oblique projections, axonometric /parallel projection, photography and montage as techniques in Architectural delineation from study till presentation.

Creative assignments that require study, analysis, documentation with weightage given to representational expression and techniques.

### **Unit - 3 DESIGN PROCESSES AND MODEL MAKING TECHNIQUES 12 hrs.**

Generative / geometry, fractals, parametrics / material explorations (both in traditional materials like mount, foam, thermacoel, clay, plaster of Paris, paper Mache, wood and new age materials like polystyrene, Aerocon blocks, plastics, meshes, and processes like carpentry, casting, moulding, welding, laser cutting etc.

Explorative exercises that involve research through a process for example nature to structure and the evolution of a structural system that can be fabricated to scale.

### **Unit - 4 PRESENTATION MODELS 9 hrs.**

Exploration in varying scales of models through instruction in techniques – Residential to urban – Historic / Contemporary buildings.

Explorative exercises involving topography, textures, landscapes, human elements etc.

### **Unit - 5 STUDY MODELS AS A TOOL IN ARCHITECTURAL DESIGN PROCESS 12 hrs.**

Exploration of the physical model as a tool through all phases of architectural design process, ranging from conceptual to specific design solutions – This Unit will have to integrate with the Architectural Design course in this semester.

**COURSE OUTCOMES:**

On completion of the course the student will have

- CO1.** Explored the conventional and less conventional techniques of representation in an attempt to creative visualization and to understand drawings as vehicles of thinking.
- CO2.** Versatility in making models ranging from study to presentation and in varying scales and materials

AARP1104	ARCHITECTURAL DESIGN I	L	T	P/S	C	Total Marks
		5	0	10	15	100

### COURSE OBJECTIVE

- To enable the conceptualization of form, space and structure through creative thinking and to initiate architectural design process deriving from first principles.
- To involve students in a design project(s) that will involve simple space planning and the understanding of the functional aspects of good design.
- To involve students in a small-scale building project(s) which will sensitize them to intelligent planning that is responsive to the environmental context.
- To involve students in building case study by choosing appropriate examples to enable them to formulate and concretize their concepts and architectural program.
- To engage in discussion and analytical thinking by the conduct of seminars/ workshops.
- To enable the presentation of concepts through various modes and techniques that will move constantly between 2D representation and 3D modeling.

### CONTEXT

Scale and Complexity: projects involving small span, single space, single use spaces with simple movement, predominantly horizontal, as well as simple function public buildings of small scale; passive energy.

#### Areas of focus/ concern:

- Architectural form and space.
- Aesthetic and psychological experience of form and space in terms of scale, colour, light, texture, etc.
- Function and need: user requirements, anthropometrics, space standards, circulation.
- Image and symbolism.

#### Unit - 1            PROJECT – 1 MAJOR            60 hrs.

Typology/ project: bedroom, bathroom, kitchen, shop, exhibition pavilion, children's environment.

Detailed drawings with furniture layout, electrical layout, flooring design, wall elevation showing finishes, detailed sections (minimum 2nos.) showing the construction details and materials of construction and other relevant building services.

#### Unit - 2            PROJECT – 2 MAJOR            60 hrs.

Typology/ project: Snack bar, residence, petrol bunk, fire station.

Detailed drawings with furniture layout, electrical layout, flooring design, wall elevation showing finishes, detailed elevations (minimum 2nos.) and sections (minimum 2nos.) showing the construction details and materials of construction other relevant building services.

#### Unit - 3            PROJECT – 3 MINOR            30 hrs.

Typology/ project: bedroom, bathroom, kitchen, shop, exhibition pavilion, children's environment, snack bar, residence, petrol bunk, fire station.

Detailed drawings with furniture layout, electrical layout, flooring design, wall elevation showing finishes, detailed elevations (minimum 2nos.) and sections (minimum 2nos.) showing the construction details and materials of construction other relevant building services.

**Total: 150 Periods / Hours**

### **COURSE OUTCOMES:**

On completion of the course the student will have

- CO1. Understanding and hands-on experience of the basic functional aspect of designing simple building type and its relevant spatial organization.
- CO2. Acquired knowledge to reciprocate and sensitize the design/concept to the environment and the design skill of the project

### III- SEMESTER

<b>AART2108</b>	<b>HISTORY OF ARCHITECTURE AND CULTURE II</b>	<b>L</b>	<b>T</b>	<b>P/S</b>	<b>C</b>	<b>Total Marks</b>
		<b>1</b>	<b>2</b>	<b>0</b>	<b>3</b>	<b>100</b>

#### **OBJECTIVES:**

- To inform about the development of architecture in the Ancient Western World and the cultural and contextual determinants that produced that architecture.
- To understand architecture as evolving within specific cultural contexts including aspects of politics, society, religion and climate.
- To gain knowledge of the development of architectural form with reference to Technology, Style and Character in the prehistoric world, Ancient Egypt, West Asia, Greece, Rome, Medieval times and Renaissance period.

#### **UNIT I -WISDOM OF THE ANCIENTS THRO RIVER VALLEY CIVILIZATION**

**6hrs**

Response to culture and context in building shelter in the Neolithic period- R. Nile and the architecture of Egypt with relevant examples – Urban form in the Indus Valley and the Tigris and Euphrates basin and relevant examples of architecture.

#### **UNIT II -CLASSICAL WORLD**

**12hrs**

Landscape and culture of Greece –Greek character – Greek polis and democracy – Domestic architecture– Evolution of the Greek temple and the building of the Acropolis –Public architecture: Theatre and Agora- optical illusions in architecture- City Planning.

Roman history: Republic and Empire –Religion, culture, lifestyle - Roman character – Roman urban planning –architecture as imperial propaganda: forums and basilicas – structural forms: materials and techniques of construction spanning large spaces with relevant examples - domestic architecture.

#### **UNIT III - EARLY CHRISTIANITY AND CHRISTIAN KINGDOMS**

**12hrs**

Birth and spread of Christianity – transformation of the Roman Empire – early Christian worship and burial. Church planning – Basilica concept and Centralized plan concept with relevant examples in the West and in the Byzantine.

The Carolingian Renaissance – Feudalism and rural manorial life – Papacy – Monasticism – Craft and merchant guilds. Medieval domestic architecture – Romanesque churches with relevant examples in Europe – Development of vaulting.

#### **UNIT IV- THE AGE OF CHURCH BUILDING**

**6hrs**

Development of Gothic architecture Church plan, structural developments in France and England with using relevant examples of church architecture in Europe – wooden roofed churches.

#### **UNIT V - IDEA OF RE-BIRTH AND RENAISSANCE IN EUROPE**

**9hrs**

Idea of rebirth and revival – Humanism –Development of thought – Reformation- the Renaissance patron – Urbanism Renaissance architecture: Brunelleschi and rationally ordered space – ideal form and the centrally planned church using relevant examples– palace and villa architecture with relevant examples – Mannerist architecture- The Renaissance in transition – works of Michelangelo; Sir Christopher Wren, Andrea Palladio, Inigo Jones- Baroque and palace building in France.

**Total: 45 Periods / Hours**

#### **OUTCOMES:**

**CO1:** An understanding about the spatial and stylistic qualities associated with architecture.

**CO2:** An Understanding of architecture as an outcome of various social, political and economic upheavals, and as a response to the cultural and context.

#### **TEXTBOOKS:**

- Sir Banister Fletcher, A History of Architecture, CBS Publications (Indian Edition), 20th Edition 2002.
- Spiro Kostof – A History of Architecture – Setting and Rituals, Oxford University Press, London, 1986.
- Francis D.K. Ching et al; A global history of Architecture; John Wiley's sons, 2nd edition 2010.

AART2109	MECHANICS OF STRUCTURES II	L	T	P/S	C	Total Marks
		2	2	0	4	100

## OBJECTIVES

- To enable understanding of the basic concepts of shear force and bending moment acting on beams subjected to different loading conditions.
- To give knowledge about how to determine stresses in beams and strength of sections.
- To give knowledge about how to calculate deflection of beams.
- To enable study of theory of columns.
- To give an understanding of the concept of indeterminate structure and its analysis.

### UNIT I SHEAR FORCE AND BENDING MOMENT

6Hrs

Basic concepts. Shear force and bending moment diagrams for cantilever and simply supported beams subjected to different types of loadings - Point loads, uniformly distributed loads. Overhanging simply supported beams. Point of contra flexure.

### UNIT II STRESSES IN BEAMS

11Hrs

Theory of simple bending. Bending stress distribution. Strength of sections. Shearing stress distribution in beam sections.

### UNIT III DEFLECTION OF BEAMS

11Hrs

Slope and deflection at a point. Double Integration method and Macaulay's method for simply supported and cantilever beams.

### UNIT IV COLUMNS

8Hrs

Short and long columns. Concept of elastic stability. Euler's theory. Assumptions and load carrying capacity of columns with different end conditions. Concept of effective length. Slenderness ratio. Limitations of Euler's theory. Rankine's formula.

### UNIT V STATICALLY INDETERMINATE BEAMS

9Hrs

Introduction. Determination of degree of statical indeterminacy for beams and frames. Analysis of propped cantilever using Moment Area method - central point load, uniformly distributed loads.

**Total: 45 Periods / Hours**

## OUTCOMES

**CO1:** Ability to apply the concepts/techniques of finding stresses.

**CO2:** Ability to use simple bending theory to find deflection in beams.

**CO3:** Ability to analyse and solve different types of columns.

**CO4:** Ability to analyse the different types of indeterminate beams.

<b>AART2110</b>	<b>BUILDING MATERIALS &amp; CONSTRUCTION II</b>	<b>L</b>	<b>T</b>	<b>P/S</b>	<b>C</b>	<b>Total Marks</b>
		<b>0</b>	<b>1</b>	<b>2</b>	<b>3</b>	<b>100</b>

## **OBJECTIVES**

- To give an introduction to brick, clay and timber products in building construction.
- To enable an understanding of the principles, methods of construction and applications of the above for structural and non-structural building components.
- To enable design and detail using all these materials in simple buildings.

### **UNIT I INTRODUCTION TO BRICK AND CLAY PRODUCTS**

**6 hrs**

Brick and clay as basic building materials and brief history of their use through examples. Types of brick and clay products. Outline of their manufacture, characteristics and applications in building construction. Products to include different types of bricks for masonry, roofing products such as pot/pan tiles and Mangalore tiles, flooring tiles such as clay, ceramic and vitrified tiles, Hourdi tiles, current innovations. Understanding of product literature. Site visits with documentation in the form of sketches/ drawings/ photos.

### **UNIT II BRICK AND CLAY IN BUILDING CONSTRUCTION**

**12hrs**

Basic principles of brick bonding and its types. Mortar, plastering, pointing, finishes for brick. Construction principles and procedures for building components using brick and clay products. Components to include foundation, load bearing walls, partition walls, compound walls, parapet walls, roofs, arches, lintels, coping, steps, flooring, paving of different types. Principles for innovative and composite construction using brick and clay products. Products to include prefabricated brick panels, precast curved brick arch panels, reinforced brick/ reinforced brick concrete slabs, prefabricated floor/ roof using structural clay units, Hourdi block roofing, current innovations. Drawings/ models of the principles. Understanding of detailed drawings/ published work. Site visits with documentation in the form of sketches/ photos.

### **UNIT III INTRODUCTION TO TIMBER AND TIMBER PRODUCTS**

**9hrs**

Timber as basic building material and brief history of its use with examples. Timber sources, classification, characteristics, defects, conversion, seasoning, storage, uses, preservation, finishes (including paint, varnish, enamel, special paints and coatings). Market forms of timber. Types of industrial timber products. Outline of their manufacture, characteristics and applications in

building construction. Products to include plywood, particle board, block board, fibre board, cement bonded particle board, sustainable products, current innovations.

Understanding of product literature. Site visits with documentation in the form of sketches/ drawings/ photos.

#### **UNIT IV TIMBER IN BUILDING CONSTRUCTION**

**12hrs**

Joints in timber. Construction principles and procedures for timber wall, floor, roof trusses (to include lean to, couple, collar, king post, queen post and roof covering material), staircase.

Construction principles and procedures for different types of timber doors, windows and ventilators. The types, whichever is applicable for each, will include materials (panelled, flush, glazed), swing, mechanisms of operation (fixed, openable, sliding, folding, sliding and folding, pivoted, revolving, top hung, bottom hung, louvred), nature - (french, corner, bay). Construction principles and procedures using timber/ industrial timber/ gypsum products for partitions (fixed, sliding, sliding and folding), panelling, false

ceiling, flooring. Hardware and fixing for all the above as applicable. Drawings/ models of the principles. Understanding of detailed drawings/ published work. Site visits with documentation in the form of sketches/ drawings/ photos.

#### **UNIT V DESIGN USING BRICK, CLAY, TIMBER AND TIMBER PRODUCTS 6hrs**

A design exercise involving use of brick, clay and timber products in appropriate structural and nonstructural components in a simple, small project of any basic typology. The project will integrate knowledge from all the previous units. Design and construction details in the form of drawings and models.

**Total: 45 Periods / Hours**

<b>AART2111</b>	<b>SITE SURVEYING AND PLANNING</b>	<b>L</b>	<b>T</b>	<b>P/S</b>	<b>C</b>	<b>Total Marks</b>
		<b>0</b>	<b>1</b>	<b>1</b>	<b>2</b>	<b>100</b>

## **OBJECTIVES**

- To inform about the ways in which the characteristics of sites can be understood.
- To enable an understanding of the macro and micro impact of buildings on it.
- To give understanding of the potential/ limitations site offers to the design of buildings.
- To give exposure to different terminologies and techniques associated with site, site surveying, site analysis and site planning.
- To explore all the above through a project.

### **UNIT I INTRODUCTION TO SITE AND SITE SURVEYING 10hrs**

Definition of plot, site, land and region, units of measurements. Introduction to survey and need for surveying. Methods of surveying and context of use. Chain survey and Triangulation – instruments used, method of survey and plotting into survey drawing. Plain table, Compass and theodolite surveys - method, instruments used and application. Modern surveying Instruments such as EDMs and Total Stations and their application. Understanding of administrative maps and site drawings, including FMB. Introduction to measuring a site, drawing out a site plan from measurements and computing area by geometrical figures and other methods. Introduction to marking plans, layout plans and centerline plans. Importance and procedure for making these drawings and dimensioning. Procedure and precautions of setting out a plan on site. Understanding the above through site visits to real projects.

### **UNIT II SITE ANALYSIS 10hrs**

Site as offering potential/ limitations to architectural design. Importance of site analysis. On site and off-site factors. Analysis of natural, cultural and aesthetic factors. Factors to include topography, hydrology, soils, vegetation, climate and microclimate, surface drainage, accessibility, size and shape, infrastructure, sources of water supply and means of disposal system, visual aspects, context of built environment. Introduction to detailed analysis involving aspects like contours, slope analysis, grading process, grading criteria, functional and aesthetic considerations. Maps of matrix analysis & composite analysis methods. Understanding the above through real projects/ case studies.

### **UNIT III SITE CONTEXT AND REGULATIONS 9hrs**

Detailed understanding of context of the site. Introduction to master plans, land use for cities, development control rules. Site selection criteria for different building typologies. Impact of building developments on the surroundings including aspects such as traffic, noise, pollution, microclimate, etc., especially in the context of large-scale projects. Understanding the above through real projects/ case studies.

### **UNIT IV PRINCIPLES OF SITE LAYOUT AND DEVELOPMENT 10hrs**

Organisation of pedestrian and vehicular circulation. Geometric calculation for movement. Types of roads, hierarchy of roads, networks, road widths and parking regulations. Principles of positive drainage and grading for drainage. Location and design of sewage treatment plants. Methods to control soil erosion. Location of utility lines to simplify maintenance. Planning for rain water harvesting. Incorporation of services such as drinking water pipelines, fire hydrants, communication and networking facilities at site. Vegetation, landforms and water as modifiers of microclimate. Understanding the above through real projects/ case studies.

## **UNIT V EXERCISE IN SITE SURVEYING AND PLANNING**

**6hrs**

Application of all the knowledge gained in previous units through a real/ hypothetical project involving a real site. The process would involve choosing site for a building typology or vice versa, field exercise in measuring and drawing the site, detailed site analysis, schematic site layout and development. The project will be explored through analysis/ models/ sketches/ drawings.

**Total: 45 Periods / Hours**

### **OUTCOMES**

**CO1:** Sensitivity towards aspects of site at macro and micro contexts.

**CO2:** Ability to exploit potential of site to design the built environment.

**CO3:** Ability to measure, draw, analyses and plan a particular site for a specific purpose.

<b>AART2112</b>	<b>CLIMATE &amp; BUILT ENVIRONMENT</b>	<b>L</b>	<b>T</b>	<b>P/S</b>	<b>C</b>	<b>Total Marks</b>
		<b>0</b>	<b>2</b>	<b>1</b>	<b>3</b>	<b>100</b>

## **OBJECTIVES**

- To introduce the concepts of human heat balance and comfort.
- To inform about the movement of sun and understand its impact on building design.
- To inform about the effects of wind and air with respect to siting and design of buildings.
- To give exposure to design strategies for building in different types of climatic zones.

### **UNIT I CLIMATE AND HUMAN COMFORT**

**9hrs**

Climate and Civilisation. Factors that determine climate of a place. Components of climate. Classification of climate for building designers in tropics. Characteristics of climate. Human body heat balance and heat loss. Effects of climatic factors on human body heat loss. Effective temperature, human thermal comfort. Use of C. Mahony's tables. Exercise related to the above.

### **UNIT II DESIGN OF SOLAR SHADING DEVICES**

**7hrs**

Movement of sun. Locating the position of sun. Sun path diagram. Overheated period. Solar shading. Shadow angles. Exercise in the design of shading devices through models/ calculations/ drawings/ software.

### **UNIT III HEAT FLOW THROUGH BUILDING ENVELOPE- CONCEPTS**

**10hrs**

The transfer of heat through solids. Definitions– Conductivity, Resistivity, Specific heat, Conductance, Resistance and Thermal capacity. Surface resistance and air cavities. Air to air transmittance (U value). Time lag and decrement. Material qualities of envelopes. Exercise involving calculation/ software for design analysis.

### **UNIT IV AIR MOVEMENT DUE TO NATURAL AND BUILT FORMS**

**10hrs**

The wind. The effects of topography on wind patterns. Air currents around building. Air movement through buildings. The use of fans. Thermally induced air currents – Stack effect, Venturi effect, use of court yard. Exercise exploring air movement in architecture with physical models/ simulation through software.

### **UNIT V CLIMATE AND DESIGN OF BUILDINGS**

**9hrs**

Design strategies in warm humid climates, hot humid climates, hot and dry climates and cold climates. Climate responsive design exercise for different contexts through sketches/ drawings/ analysis/ detailing/ calculation.

**Total: 45 Periods / Hours**

## **OUTCOMES**

**CO1:** An understanding of heat balance in human beings.

**CO2:** An understanding of the effect of sun and wind on buildings.

**CO3:** An understanding of material effects in buildings.

**CO4:** Ability to design buildings with respect to climate.

<b>AART2105</b>	<b>ARCHITECTURAL DESIGN II</b>	<b>L</b>	<b>T</b>	<b>P/S</b>	<b>C</b>	<b>Total Marks</b>
		<b>5</b>	<b>0</b>	<b>10</b>	<b>15</b>	<b>100</b>

## **OBJECTIVES**

- To enable an understanding of the fundamental possibilities of architectural form and space in relation to human experience and use within the context of the immediate living environment.
- To get the above understanding through personal, first-hand exploration as well as through theoretical and literature studies.
- To use this understanding to create meaningful built environment in the context of small-scale projects that involve simple function and experience.

## **CONTENT**

Designing a built environment requires the development of individual capacity for thought with respect to subjective and objective aspects. Studying and designing projects of small scale that involve a more immediate and basic experience is important in this context. The study and project exploration will involve the following aspects from first principles as well as through live studies and theory – human behaviour, activities and needs for various purposes, role of specific form/space in creating particular experiences and effects, built form-open space relationships, spatial organisation, environment behaviour aspects (especially those relating to children), site as a positive tool in all scales, potential of materials and construction. Through this, both the qualitative and quantitative attributes of design can be understood and engaged. This would give training in the ingenious use of architecture to fulfil goals towards a responsive and stimulating environment. The techniques used for study and presentation can align themselves towards the above, such as cognitive maps, sketches, manual drawings, physical models with simple materials. The scale and complexity of projects will be commensurate with this - small to medium size projects involving buildings/ small campuses with simple circulation, passive energy, multiples of single unit space, single use buildings. Some suggestive projects are small buildings or small campuses involving civic/ cultural use, uses related to children such as schools, facilities for people with special requirements. The number of projects is left to the discretion of the faculty based on scale and complexity.

**Total: 135 Periods / Hours**

## **OUTCOMES**

- Ability to perceive, understand and represent fundamental attributes of form- space with respect to human experience and use.
- Ability to ideate, innovate and create meaningful built environment in basic human situations.

## IV SEMESTER

<b>AART2113</b>	<b>DESIGN OF STRUCTURES I</b>	<b>L</b>	<b>T</b>	<b>P/S</b>	<b>C</b>	<b>Total Marks</b>
		<b>2</b>	<b>2</b>	<b>0</b>	<b>4</b>	<b>100</b>

### OBJECTIVES

- To get introduced to basic structural members in timber and steel.
- To give knowledge to design different timber components in a building.
- To enable an understanding of the types, efficiency and strength, advantages and disadvantages of rivet and welded joints in steel.
- To enable the design of tension (beams) and compression (columns) steel members in a building under different conditions.

### **UNIT I TIMBER STRUCTURES - DESIGN OF BEAMS AND COLUMNS** **9hrs**

Grading of timber. Permissible stresses. Design of solid timber beams. Design of solid timber columns.

### **UNIT II STEEL STRUCTURES - BOLTED AND WELDED JOINTS** **9hrs**

Assumptions. Failure of bolted joints. Strength and efficiency of bolted joints. Types. Design of bolted joints for axially loaded members (excluding eccentric connections). Types of welded joints and their advantages and disadvantages. Design of fillet welds (excluding eccentric connections).

### **UNIT III STEEL TENSION MEMBERS** **9hrs**

Introduction. Net sectional area. Permissible stresses. Design of axially loaded tension member. Lug angle, tension splice.

### **UNIT IV STEEL COMPRESSION MEMBERS** **9hrs**

Introduction. Different sections. Built up section. Design of columns (excluding lacing, battening and other connections).

### **UNIT V STEEL BEAMS** **9hrs**

Introduction. Laterally supported and unsupported beams. Design of laterally supported beams.

**Total: 45 Periods / Hours**

## **OUTCOMES**

**CO1:** Ability to design timber beams and columns by applying the code provisions.

**CO2:** Ability to design steel joints for maximum efficiency and strength.

**CO3:** Ability to design tension and compression members for different conditions by applying the code provisions.

**CO4:** Ability to design different types of laterally unsupported & supported beams for different conditions.

<b>AART2114</b>	<b>ENVIRONMENTAL SCIENCE FOR THE BUILT ENVIRONMENT</b>	<b>L</b>	<b>T</b>	<b>P/S</b>	<b>C</b>	<b>Total Marks</b>
		<b>0</b>	<b>2</b>	<b>0</b>	<b>2</b>	<b>100</b>

### **OBJECTIVES**

- To enable understanding of the environment, and its interrelationship with living organisms.
- To help understand the importance of environment by assessing its impact on humans and to envision the surrounding environment, its functions and its value.
- To give understanding of dynamic processes and features of the earth's interior and surface.
- To give awareness about integrated themes and biodiversity, natural resources, pollution control and waste management.
- To inform about scientific, technological, economic and political solutions to environmental problems.

### **UNIT I ENVIRONMENT, ECOSYSTEMS AND BIODIVERSITY**

**12hrs**

Definition, scope and importance of environment. Need for public awareness. Concept of an ecosystem. Structure and function of an ecosystem – producers, consumers and decomposers. Energy flow in the ecosystem. Ecological succession. Food chains, food webs and ecological pyramids. Introduction to types, characteristic features, structure and function of the (a) forest ecosystem (b) grassland ecosystem (c) desert ecosystem (d) aquatic ecosystems (ponds, streams, lakes, rivers, oceans, estuaries). Introduction to biodiversity. Definition and types- genetic, species and ecosystem diversity. Bio geographical classification of India. Value of biodiversity – consumptive use, productive use, social, ethical, aesthetic and option values. Biodiversity at global, national and local levels. India as a mega-diversity nation. Hot-spots of biodiversity. Threats to biodiversity - habitat loss, poaching of wildlife, man wildlife conflicts. Endangered and endemic species of India. Conservation of biodiversity - In-situ and ex-situ conservation of biodiversity. Field study of common plants, insects, birds. Field study of simple ecosystems – pond, river, hill slopes, etc.

### **UNIT II ENVIRONMENTAL POLLUTION**

**7hrs**

Definition. Causes, effects and control measures of: (a) Air pollution (b) Water pollution (c) Soil pollution (d) Marine pollution (e) Noise pollution (f) Thermal pollution (g) Nuclear hazards. Soil waste management. Causes, effects and control measures of municipal solid wastes. Role of an individual in prevention of pollution. Pollution case studies. Disaster management - floods,

earthquake, cyclone and landslides. Field study of local polluted site – Urban/ Rural/ Industrial/ Agricultural.

### **UNIT III NATURAL RESOURCES**

**8hrs**

Forest resources - Use and over-exploitation, deforestation, timber extraction, case studies. Mining, dams and their effects on forests and tribal people. Water resources - Use and overutilization of surface and ground water. Floods, drought, conflicts over water. Dams-benefits and problem. Mineral resources - Use and exploitation, environmental effects of extracting and using mineral resources, case studies. Food resources - World food problems, changes caused by agriculture and overgrazing, effects of modern agriculture, fertilizer-pesticide problems, water logging, salinity, case studies. Energy resources - Growing energy needs, renewable and non-renewable energy sources, use of alternate energy sources. case studies. Land resources - Land as a resource, land degradation, man induced landslides, soil erosion and desertification. Role of an individual in conservation of natural resources Equitable use of resources for sustainable lifestyles. Field study of local area to document environmental assets – river/ forest/ grassland/ hill/ mountain.

### **UNIT IV SOCIAL ISSUES AND THE ENVIRONMENT**

**9hrs**

From unsustainable to sustainable development. Urban problems related to energy. Water conservation, rain water harvesting, watershed management. Resettlement and rehabilitation of people; problems and concerns, case studies. Role of non-governmental organisations. Environmental ethics - Issues and possible solutions. Climate change, global warming, acid rain, ozone layer depletion, nuclear accidents and holocaust, case studies. Wasteland reclamation. Consumerism and waste products. Environment protection act, Air (Prevention and Control of Pollution) act, Water (Prevention and control of Pollution) act, Wildlife protection act, Forest conservation act. Enforcement machinery involved in environmental legislation. Central and state pollution control boards. Public awareness.

### **UNIT V HUMAN POPULATION AND THE ENVIRONMENT**

**9hrs**

Population growth, variation among nations. Population explosion. Family welfare programme. Environment and human health. Human rights. Value education. HIV/AIDS awareness. Women and child welfare. Role of information technology in environment and human health. Case studies.

**Total: 45 Periods / Hours**

## **OUTCOMES**

**CO1:** Sensitivity towards the environment as a totality and knowledge about its importance.

**CO2:** An understanding of the role of public awareness and participation with respect to environmental issues, apart from laws.

## **TEXTBOOKS**

<b>AART2115</b>	<b>BUILDING MATERIALS AND CONSTRUCTION III</b>	<b>L</b>	<b>T</b>	<b>P/S</b>	<b>C</b>	<b>Total Marks</b>
		<b>1</b>	<b>0</b>	<b>2</b>	<b>3</b>	<b>100</b>

## **OBJECTIVES**

- To give an introduction to metals as material for building construction.
- To give knowledge about the principles, methods of construction and applications of metals for structural and non-structural building components.
- To provide familiarity with market forms of metals and finishes for them.
- To enable design and detail using metals in buildings.

### **UNIT I FERROUS METALS IN BUILDING CONSTRUCTION**

**12hrs**

Iron and steel as building materials and brief history of their use through examples. Types of iron and their uses in building. Outline of manufacture of steel and steel alloys. Their properties, types, uses, protection and finishes. Corrosion of ferrous metals and its prevention. Fire protection of steel. Steel sections and products for structural and non structural use including current innovations. Joints in steel- welding, riveting, bolting. Stainless steel. Understanding of product literature. Site visits.

### **UNIT II STEEL IN NON-STRUCTURAL BUILDING COMPONENTS**

**12hrs**

Construction principles and procedures for nonstructural building components using steel. Components to include doors, windows, ventilators, rolling shutters of different types as applicable - openable, sliding, pivoted, fixed, louvred. Glazing, hardware and fixing for components. Sketching/ drawing/ models of the principles. Understanding of product literature/ shop drawings. Site visits with documentation in the form of sketches/ drawings/ photos.

### **UNIT III STEEL IN STRUCTURAL BUILDING COMPONENTS**

**12hrs**

Construction principles and procedures for structural building components using steel. Components to include foundations, columns, beams, staircases, roofs (different types of trusses, space frames, etc), total structures such as geodesic dome. Connections between the different components and fixing. Materials for glazing, cladding, roof covering, etc., as required for particular components, and their fixing. Prefabrication in steel. Drawings/ models of the principles. Understanding of product literature/ shop drawings. Site visits with documentation in the form of sketches/ drawings/ photos.

### **UNIT IV NON-FERROUS METALS IN BUILDING CONSTRUCTION**

**12hrs**

Aluminium and aluminium alloys in building construction. Brief history of their use through examples. Their manufacture, properties, durability, finishes and uses. Aluminium products such as extrusions, foils, castings, sheets, current innovations. Construction principles and procedures for non-structural building components using aluminium. Components to include door, window, ventilator of different types - openable, sliding, pivoted, fixed, louvred, etc., as applicable. Aluminium for interior components such as panelling, partitions and false ceiling. Glazing, hardware and fixing for components. Introduction to Aluminium curtain wall glazing. Sketching/ drawing/ models of the principles. Understanding of product literature/ shop drawings. Site visits with documentation in the form of sketches/drawings/photos. Introduction to other non-ferrous metals such as copper, lead, zinc. Their manufacture, properties, uses and finishes.

## **UNIT V DESIGN AND DETAILING USING METALS**

**12hrs**

A design and detailing exercise involving metals, predominantly steel, as primary construction material in an appropriate typology involving a simple scale project. The project will integrate knowledge from all the previous units. Design and construction details in the form of sketches, drawings, models.

**Total: 60 Periods / Hours**

### **OUTCOMES**

**CO1:** Knowledge of properties of ferrous and non-ferrous metals as materials for buildings.

**CO2:** An understanding of possibilities of steel as an important building construction material.

**CO3:** Ability to design and detail structural and non-structural components of simple buildings using metals.

**CO4:** Ability to use metal innovatively in building projects.

<b>AART2116</b>	<b>BUILDING SERVICES I</b>	<b>L</b>	<b>T</b>	<b>P/S</b>	<b>C</b>	<b>Total Marks</b>
		<b>1</b>	<b>0</b>	<b>2</b>	<b>3</b>	<b>100</b>

## **OBJECTIVES**

- To give information about water supply source, treatment and distribution.
- To give information about waste water disposal and sewerage systems.
- To give information about drainage system, refuse collection and disposal.
- To give exposure to sustainable practices in all the above contexts.
- To give an overall understanding of how to plan for all the above in small buildings, campuses and neighborhoods.

### **UNIT I WATER QUALITY, TREATMENT AND DISTRIBUTION 9 hrs**

Sources of water supply. Water Quality. Water requirements for all type of residential, commercial, industrial buildings and *for* town. Water treatment methods – screening, aeration, sedimentation, filtration, disinfection, softening. Conveyance of water. Distribution of water. Water piping systems in all type of buildings. Choice of pipe materials. Types of fixtures and fittings. Water consumption calculations for various contexts. Water meters. Design and calculations of OHTs, UG Sumps and firefighting storage. Related mechanical equipment. Automation systems. Water heating systems, solar water heaters. Energy efficient systems. Green and sustainable concepts in the above where relevant. Understanding of service drawings. Site visits with documentation in the form of sketches/ drawings/ photos.

### **UNIT II SULLAGE AND SEWAGE DISPOSAL 9 hrs**

Sewage and sullage. Their disposal. Primary treatment. Types of sewer systems. Secondary treatment. Biological treatment. Modern types of sewage treatment plants - neighbourhood and site level. Related mechanical equipment. Sewer line, gradients, manholes, inspection chambers, septic tank, leach pits, traps. Byelaws for sanitation. Sanitary fittings and their requirements. Green and sustainable concepts in the above where relevant. Understanding of service drawings. Site visits with documentation in the form of sketches/ drawings/ photos.

### **UNIT III STORM WATER DRAINAGE AND RAIN WATER HARVESTING 8 hrs**

Basic principles of storm water drainage. Drain pipes and type of pipe. Storm water gutter. Rain water harvesting principles, Storage sumps. Different types of pavements and details for water percolation. Current ideas of sustainability in the above. Understanding of service drawings. Site visits with documentation in the form of sketches/ drawings/photos.

### **UNIT IV SOLID WASTE MANAGEMENT 10 hrs**

Solid waste types, segregation and refuse collection. Disposal - Incinerator, composting, vermicomposting, sanitary land filling, bio gas system, modern renewable energy system. Current ideas of sustainability in the above. Understanding of service drawings. Site visits with documentation in the form of sketches/ drawings/ photos.

## **UNIT V DESIGN OF SERVICES**

**9 hrs**

Schematic design of water supply, sewage, drainage and solid waste services in the context of a small building/ campus/ neighbourhood. The project will integrate knowledge from all the previous units. Design in the form of choice, details of system and layout/ drawings.

**Total: 45 Periods / Hours**

### **OUTCOMES**

**CO1:** Understanding of water supply, sewage, drainage and waste systems in buildings.

**CO2:** Ability to conceptually plan/ design the above for a given simple context.

**CO3:** Awareness of sustainable principles and best practices.

AART2117	COMPUTER AIDED VISUALIZATION	L	T	P/S	C	Total Marks
		1	0	2	3	100

## OBJECTIVES

- To introduce computer operation principles and explore image editing through a graphical composition.
- To impart training in computer aided 2D drafting and 3D modelling through projects.
- To enable the use of computer applications to develop a design from the initial stages to the final outcome.
- To enable the rendering of a building so as to create a photo realistic image.

### UNIT I INTRODUCTION TO COMPUTER AND IMAGE EDITING 10hrs

Technology of small computer system. Computer terminology. Operation principles of P.C. Introduction to application software, graphic system, use of printers, scanner, plotter, file management, etc. Understanding bitmap images and vector graphics, image size and resolution. Basic tools for editing and creating graphics. Exercise in creating visual compositions using digital graphics (pixels/vector).

### UNIT II THE BASICS OF BUILDING MODELLING 10hrs

Creating a basic floor plan. Temporary dimensions. Adding and modifying walls. Working with compound walls. Using editing tools. Adding and modifying doors. Adding and modifying windows 2D Drafting exercise of a simple building.

### UNIT III VIEWING THE BUILDING MODEL 10hrs

Understanding the drawing unit's settings, scales, limits, drawing tools, drawing objects, object editing, and text, dimensioning. Transparent overlays, hatching utilities, line type, line weight and colour. Multiline, polyline, etc. Styles, blocks and symbol library. Drafting exercise on the above.

### UNIT IV INTRODUCTION TO 3D MODELLING 10hrs

Slide facilities script attributes, V-port, editing session. Introduction to 3D-modelling technique and construction planes, drawing objects, 3D surfaces setting up elevation thickness and use of dynamic projections. Solid modelling with primitive command and Boolean operation. 3D sculpture exercise using 3D primitives (cubes, spheres etc.)

### UNIT V 3D RENDERING AND SETTING 10hrs

Rendering and scene setting to create a photo realistic picture, understanding material mapping, environment setting and image filling. Exercise on visualising a building and exploring the potential of lights and camera.

**Total: 50 Periods / Hours**

## OUTCOMES

**CO1:** Ability to express using digital tools in the realm of visual composition, drafting, 3D visualization and rendering.

## TEXTBOOKS

<b>AARP2106</b>	<b>ARCHITECTURAL DESIGN III</b>	<b>L</b>	<b>T</b>	<b>P/S</b>	<b>C</b>	<b>Total Marks</b>
		<b>5</b>	<b>0</b>	<b>10</b>	<b>15</b>	<b>100</b>

## **OBJECTIVES**

- To create understanding of human-built environment as a holistic, living entity from macro to micro scales, and shaped by geographic and socio-cultural forces as well as by historic, political and economic factors, through study of and design within the context of rural settlements.
- To enable a comprehensive study of rural settlement and architecture in order to understand them as exemplar of collective design that evolved through various parameters.
- To observe changes in the above, analyse their nature and causes for them.
- If required, to explore possible policy and physical interventions towards positive changes within the context studied.
- To enable design process that engages context and community.

## **CONTENT**

Rural settlements offer an opportunity to understand basic aspects of human built environment and what goes into its making/ influences it. The interrelationship between built form and society will be studied, understood and established, starting from either end as required. Study of specific modes of rural/vernacular/traditional architecture including their morphology, local materials and construction techniques, details, meaning, etc., will be done to give an insight into the particulars and universals of architecture. Appropriate tools and processes can be used to aid the understanding. These include different methods of historical and socio-cultural study, oral history, discussions, information collection, surveys, maps, perceptual sketches, documentation through drawings, demographic study, assimilation and analysis. Transformations across time need to be traced to understand constants and dynamics in human society. They will also be critically evaluated through discussions with experts. Rising from this, future changes can be projected/ envisaged and if found required, policy and physical interventions can be suggested/ explored. The physical interventions found necessary will be taken up as design situations. This could range from individual to community level and involve any aspect of the physical environment (including building projects) as the situation/viewpoint warrants. If the context does not warrant a building need, a small community-oriented building design will be given as a separate project in addition to the rural project. For building projects, the scale and complexity of planning and construction usually involved will be simple - small or medium span, ground plus

two storeyed maximum, simple horizontal and vertical movement, simple/ local materials and construction, passive energy.

**Total: 150 Periods / Hours**

## **OUTCOMES**

**CO1:** Ability to collect, assimilate and integrate knowledge in a holistic manner.

**CO2:** Sensitivity towards the nature and values of unselfconscious and collective design as well as the interconnectedness of human society and environment.

**CO3:** Ability to observe and analyse changes in the above.

**CO4:** Ability to project future transformations and give possible/ appropriate ways to address issues, if any.

**CO5:** Sensitivity in design approach in community-oriented projects with respect to context, collective values and needs.

## V SEMESTER

AART3118	DESIGN OF STRUCTURES II	L	T	P/S	C	Total Marks
		2	2	0	4	100

### OBJECTIVES

- To inform about structural design through working stress and limit state methods.
- To enable use of the above two methods for the design of concrete beams and slabs under different conditions.
- To enable use of limit state method for design of a concrete staircase.

#### UNIT I DESIGN OF CONCRETE MEMBERS AND WORKING STRESS DESIGN OF CONCRETE BEAMS 9Hrs

Concept of elastic method, Ultimate load method and limit state method. Advantages of limit state method over other methods. Analysis and design of singly reinforced rectangular beam for bending.

#### UNIT II LIMIT STATE DESIGN OF CONCRETE BEAMS 9Hrs

Analysis and design of singly and doubly reinforced rectangular and flanged beams for bending.

#### UNIT III LIMIT STATE DESIGN OF CONCRETE SLABS 9Hrs

Behavior of one way and two-way slabs. Design of one way and two-way slabs for various edge conditions. Corner effects.

#### UNIT IV DESIGN OF CONCRETE CIRCULAR SLABS 9Hrs

Design of simply supported and fixed circular slabs subjected to uniformly distributed loads.

#### UNIT V DESIGN OF CONCRETE STAIRCASE BY LIMIT STATE METHOD 9Hrs

Types of staircases. Design of dog legged staircase.

**Total: 45 Periods / Hours**

### OUTCOMES

- CO1:** Ability to understand the different concepts of WSM and LSD methods using the code provisions.
- CO2:** Ability to design RCC beams and slabs by applying the above concepts.
- CO3:** Ability to design RCC dog legged staircase design using LSD.

<b>AART3119</b>	<b>HISTORY OF ARCHITECTURE AND CULTURE III</b>	<b>L</b>	<b>T</b>	<b>P/S</b>	<b>C</b>	<b>Total Marks</b>
		<b>1</b>	<b>3</b>	<b>0</b>	<b>4</b>	<b>100</b>

## **OBJECTIVES**

- To introduce the condition of modernity and outline its impact on society, cities and architecture.
- To give a detailed understanding of modern architecture as new expression with different strands rising from various aspects and effects of modernity.
- To create an overall understanding of the architectural developments in India rising out of colonial modernity and nationalism.

### **UNIT I MODERNITY AND ARCHITECTURE**

**12Hrs**

Overview of modernity as a historical phenomenon and its various aspects and manifestations, encompassing social, cultural, technological, economic and political changes. Outline of various strands of modernity in architecture. Enlightenment ideals, Neo Classical architecture and its types. Outline of Industrial Revolution and associated changes. Urban transformations in Europe and America. Housing projects. New building types and spaces. Industrial material of steel, glass and concrete. New construction techniques and standardization. Split of design education into architecture and engineering streams. Industrial exhibitions. Chicago School, skyscraper development and Louis Sullivan.

### **UNIT II REVIEWING INDUSTRIALISATION**

**7Hrs**

Opposition to industrial arts and production - Arts and Crafts in Europe and America: Morris, Webb- Art Nouveau: Horta, Van De Velde, Gaudi, Guimard, Mackintosh - Vienna secession: Hoffman, Olbrich Wright's early works

### **UNIT III EVOLUTION OF MODERN ARCHITECTURE - IDEOLOGIES, MOVEMENTS AND STYLES**

**8Hrs**

Early modernism in Europe and America. Critique of ornamentation and Raumplan of Adolf Loos. Peter Behrens and Werkbund. Modern art and architecture - Expressionism, Futurism, Constructivism, Cubism, Suprematism and De–Stijl. Art Deco. Functionalism. Bauhaus. CIAM. International Style. Outline of works and architects associated with all the above.

### **UNIT IV MODERNIST ARCHITECTS AND THEIR WORKS**

**9Hrs**

Ideas, works of Corbusier: Brasilia, of Gropius Unite- Works of later modernists: Louis Kahn, Paul Rudolph, Eero Saarinen

### **UNIT V COLONIAL ARCHITECTURE IN INDIA**

**9Hrs**

Colonialism and its impact - early colonial architecture: forts, bungalows, cantonments- Stylistic transformations: Neo-classicism, Gothic Revival and Indo Saracenic -PWD and institutionalization of architecture - Building of New Delhi showcasing imperial power.

**Total: 45 Periods / Hours**

## **OUTCOMES**

**CO1:** An understanding of modernity as a fundamental transformation in Western society that spread across the world and the resultant architectural production.

**CO2:** An insight into the development of modern architecture.

**CO3:** An understanding of architecture in India under influence of colonialism and colonial modernity.

<b>AART3120</b>	<b>URBAN HOUSING</b>	<b>L</b>	<b>T</b>	<b>P/S</b>	<b>C</b>	<b>Total Marks</b>
		<b>3</b>	<b>0</b>	<b>0</b>	<b>3</b>	<b>100</b>

**OBJECTIVES:**

- To understand the basic elements, principles & various issues related to housing & National Housing Policy especially in the urban context.
- To expose the students about various agencies involved in the housing development & the institutional mechanism for housing.
- To understand the various factors (social, economic, etc.,) responsible for the design of plan & the various schemes under which they can be implemented.
- To update about the Indian norms, standards & guidelines.
- To understand about the various typologies of housing with case examples and the stages involved in the development of housing.

**UNIT: I INTRODUCTION TO HOUSING AND HOUSING ISSUES – INDIAN CONTEXT** **9Hrs**

Housing and its importance in Architecture and its relationship with neighborhood and city planning. Housing demand and supply - National Housing Policy - Housing agencies and their role in housing development - impact of traditional life style - Rural Housing, Public, private sector housing.

**UNIT: II SOCIO-ECONOMIC ASPECTS** **9Hrs**

Social & economic factors influencing housing affordability - Housing Finance - equity in housing development sites and services/- slum upgradation community participation - Indira Awas Yojana, Crime prevention, Health principles in Housing.

**UNIT: III HOUSING STANDARDS** **9Hrs**

UDPFPI - guide lines, standards and regulations - DCR - performance standards for housing.

**UNIT: IV SITE PLANNING AND HOUSING DESIGN** **9Hrs**

A. Site Planning Selection of site for housing, consideration of physical characteristics of site, locational factors, orientation, climate, topography - Landscaping. B. Housing design Traditional housing, row housing, cluster housing - apartments and high-rise housing relating to Indian situations - case studies in India - integration all types of services, parking, incorporation of green sustainable practices - prefabrication in housing.

**UNIT: V HOUSING PROCESS AND ISSUES IN HOUSING** **9Hrs**

Various stages and tasks in project development - Institutional Mechanism in housing - PPP and other models, housing management - Environmental aspects and national calamities and disaster mitigation, Innovative approach to solve India's Housing problem. Green building and sustainable practices. Disaster resistance and mitigation. Prefabrication Community participation.

**Total: 45 Periods / Hours**

**OUTCOMES:**

- CO1:** Creates awareness about the need, demand and the supply of housing, the process and the issues related to it.
- CO2:** Imparts knowledge in students to find possible solutions.
- CO3:** Students get to know the basic elements; principles & various issues related to housing & National Housing Policy especially in the urban context.
- CO4:** Students are exposed to various agencies involved in the housing development & the institutional mechanism for housing.
- CO5:** Students understand the various factors (social, economic, etc.,) responsible for the design of plan, various schemes under which they can be implemented and are updated about the Indian norms, standards & guidelines.

**TEXT BOOKS:**

AART3121	BUILDING MATERIALS & CONSTRUCTION IV	L	T	P/S	C	Total Marks
		1	0	3	4	100

## OBJECTIVES

- To give an introduction to cement and concrete as materials for building construction.
- To help understand the principles, types, methods of construction and applications of concrete for structural and non-structural building components.
- To enable design and detail using concrete in buildings.

### UNIT I INTRODUCTION TO CEMENT AND CONCRETE

12Hrs

Cement and concrete as building materials. Brief history of their use through examples. Composition, manufacture, properties, types and uses of cement. Tests for cement. Introduction to cement mortar and plastering and their composition. Concrete and its composition. Mix design. Nature of aggregates for mix including classification, sources, shape, size, grading, sampling and analysis. Proportioning, water-cement ratio, workability. Stages in concrete construction- formwork, mixing, placing, curing. Cement and concrete finishes including roughcast, dry dash, textured, stucco. Water proofing and damp proofing of concrete. Understanding of product literature. Site visits with documentation in the form of sketches/ photos.

### UNIT II CAST IN-SITU CEMENT CONCRETE IN BUILDING CONSTRUCTION

12Hrs

Construction principles and procedures for building components using cast in situ cement concrete (plain and reinforced). Components to include different types of foundations, columns, beams, slabs, walls, lintels and sun shades, staircases, sump, water tank, flooring. Drawings/ models of the principles. Understanding of detailed drawings/ published work. Site visits with documentation in the form of sketches/ photos.

### UNIT III PRECAST CONCRETE PRODUCTS IN BUILDING CONSTRUCTION

12Hrs

Types and characteristics of simple precast concrete products. Construction principles and procedures for structural and non-structural building components using precast concrete. Components to include different types of blocks/ tiles for walls, floors and roof, jali, parapet, paving. Outline of manufacture, laying/constructing and finishing. Sketching/ drawing/ models of the principles. Understanding of product literature/ published work. Site visits with documentation in the form of sketches/ photos.

### UNIT IV SPECIAL CONCRETES AND INNOVATIONS IN CONCRETE

12Hrs

Types of special concretes, to include lightweight concrete, aerated concrete, no-fines concrete, polymer concrete, pre-stressed concrete, fibre-reinforced concrete, ready-mixed concrete, ferrocement. Building materials and components developed by research organisations like CBRI, SERC, NBO, and BMTPC. Techniques for renovation and retrofitting. Basic principles for seismic design in concrete. Understanding of product literature/ published work. Site visits with documentation in the form of sketches/ photos.

### UNIT V DESIGN AND DETAILING USING CONCRETE

12Hrs

Design and detailing exercise involving concrete as primary construction material in an appropriate typology involving a simple scale project. The project will integrate knowledge from all the previous units. Design and construction details in the form of drawings, sketches and models.

**Total: 60 Periods / Hours**

## **OUTCOMES**

**CO1:** Ability to use concrete as a versatile material in different contexts.

**CO2:** An understanding of the concepts of concrete as a building construction material.

**CO3:** Ability to design and detail specific components in concrete where there is scope for

**CO4:** architectural design.

**CO5:** Ability to use concrete innovatively in simple projects

<b>AART3122</b>	<b>BUILDING SERVICES II</b>	<b>L</b>	<b>T</b>	<b>P/S</b>	<b>C</b>	<b>Total Marks</b>
		<b>2</b>	<b>0</b>	<b>2</b>	<b>3</b>	<b>100</b>

## **OBJECTIVES**

- To inform about the principles and laws of electricity and wiring systems in buildings.
- To inform about the principles and laws of lighting systems in buildings.
- To inform about the principles and laws of acoustics in buildings.
- To give exposure to the design of electrical, lighting and acoustic systems in buildings of small scale.

## **UNIT I GENERATION OF ELECTRICITY AND DISTRIBUTION IN BUILDINGS**

**12Hrs**

Generation of electricity. Ohms and Kirchoffs Laws. Units: watt, volt, amps. Distribution from grid to facilities. Two phase and three phase systems. Substation, transformers, generators. Wires and conduits, types and applications. Lightning conductors and earthing. Distribution boards, meters, switch boards, earthing. Energy efficient systems and renewable energy resources. Understanding of service drawings. Site visits with documentation in the form of sketches/ drawings/ photos. Design of electrical layout for buildings of small scale through drawings.

## **UNIT II INTRODUCTION TO LIGHTING**

**7Hrs**

Electromagnetic spectrum. Sources of light. Laws and terminologies of lighting. Daylight. Considerations for designing with daylight - typology, room dimensions, openings. Daylight Factor. Light from artificial sources, quantity and quality. Types of lamps and luminaires. Applications and choice of luminaires. Energy efficient systems. Understanding of product literature/ service drawings. Site visits with documentation in the form of sketches/ drawings/ photos.

## **UNIT III LIGHTING DESIGN FOR BUILDINGS**

**8Hrs**

Lighting level for different uses in outdoor and indoor environment. Lighting calculations. Lighting simulation and performance analysis using software. Design exercise involving lighting design for appropriate projects of simple scale through choice, calculations, layout, drawings, simulations, physical models.

## **UNIT IV FUNDAMENTALS OF ACOUSTICS**

**9Hrs**

Fundamentals – sound waves, frequency, intensity, wave length, measure of sound, decibel scale, speech and music frequencies. NC curves. Permissible noise limits. Material property - absorption, reflection, scattering, diffusion, transmission. Absorption co-efficient, NRC, Sound Transmission Class (STC), Impact Insulation Class (IIC). Understanding acoustic properties of materials/ products through study of product literature/ site visits.

## **UNIT V ENVIRONMENTAL ACOUSTICS**

**9Hrs**

Environmental noise and its control. Structure borne and air borne noise control. Site selection. Sound in enclosed space: Reverberation time, optimum reverberation time, echo, early decay time. Architectural acoustics. Importance of shape volume, treatment for interior surfaces, etc. Basic principles in designing classroom, lecture and conference hall, offices, open air theatre, auditorium, concert hall, theatre, cinema, recording studio. Understanding of drawings/ details related to real acoustic design projects. Site visits with documentation in the form of sketches/ drawings/ photos. Simple problems based on reverberation time and absorption coefficients. Acoustic design for simple and small projects including planning,

constructional measures and sound reinforcement systems through calculations, conceptual sketches, drawings, models.

**Total: 45 Periods / Hours**

### **OUTCOMES**

**CO1:** Knowledge of basics of electrical, lighting and acoustic systems in buildings.

**CO2:** Ability to design buildings satisfying electrical, lighting and acoustic principles.

**CO3:** Ability to design basic electrical, lighting and acoustic systems for buildings.

### **TEXTBOOKS**

<b>AARP3107</b>	<b>ARCHITECTURAL DESIGN IV</b>	<b>L</b>	<b>T</b>	<b>P/S</b>	<b>C</b>	<b>Total Marks</b>
		<b>5</b>	<b>0</b>	<b>10</b>	<b>15</b>	<b>100</b>

## OBJECTIVES

- To introduce the challenges involved in the design of projects related to diverse needs and ways of contemporary urban life.
- To enable exploration of the above projects with perception, socio-cultural awareness and innovation.

## CONTENT

Urban environment is synonymous with heterogeneity of populace and their diverse needs and lifestyles. Private and public spaces for varied programmes such as living, working and socio-cultural needs bring individuals and groups in intersection or proximity to each other. Further, current transformations in urban society have led to many changes in buildings. The challenge within the discipline of architecture is not only to create conducive spaces for contemporary ways of life within particular contexts, but also to identify issues and programmes and address them in innovative ways. These would include urban living, urban working, socio-cultural life, urban recreation, etc., Achieving comfort without sacrificing on density would also be a concern, along with exposure to building byelaws and barrier free environment. The approach and projects will be directed towards one or more of these aspects. The tools and techniques engaged for study and design can be those which are best suited to study the above, including mapping of urban patterns/ways of life and needs, demographics, socio-cultural aspects, densities, land use, etc., Projects will address specific situations/scenarios characteristic of urban life and context, either single or mixed use. They will be of medium to large scale, involving repetitive or unique spaces, low- or mid-rise buildings with passive/active energy. The number of projects is left to the discretion of the faculty based on scale and complexity.

**Total: 150 Periods / Hours**

## OUTCOMES

- CO1:** Ability to understand the nature, needs and ways of contemporary urban society as well as relate the existing built environment as a reflection of this.
- CO2:** Ability to draw from this understanding and identify issues/ challenges involving contemporary urban life and the built environment.
- CO3:** Ability to give appropriate/ innovative design solutions in the above context.

## VI SEMESTER

AART3123	DESIGN OF STRUCTURES III	L	T	P/S	C	Total Marks
		2	2	0	3	100

### OBJECTIVES

- To enable use of limit state design for the analysis and design of columns.
- To enable the learning of design of structural elements like footings, retaining walls and masonry walls.
- To give understanding of the principle, methods, advantages and disadvantages of pre stressed concrete.

### UNIT I LIMIT STATE DESIGN OF COLUMNS

9Hrs

Types of columns. Analysis and design of short columns for axial, uniaxial and biaxial bending. Use of design aids.

### UNIT II DESIGN OF FOOTINGS

9Hrs

Types of footings. Design of wall footings. Design of axially loaded square & rectangular footings (pad and sloped).

### UNIT III FLAT SLABS

9Hrs

Design principles of flat slabs. Code provision. Simple design problems.

### UNIT IV DESIGN OF MASONRY WALLS

9Hrs

Analysis and design of masonry walls. Use of nomograms. Code requirements.

### UNIT V INTRODUCTION TO PRESTRESSED CONCRETE

9Hrs

Principle of prestressing. Methods of prestressing, advantages and disadvantages. Simple analysis problems.

**Total: 45 Periods / Hours**

### OUTCOMES

**CO1:** An understanding of the different concepts in designing footings and columns and masonry walls using LSD methods.

**CO2:** An understanding of the concepts and applications of prestressed concrete.

		<b>3</b>	<b>0</b>	<b>0</b>	<b>3</b>	<b>100</b>

## **OBJECTIVES**

- To introduce the large-scale changes from 1960s as context for new thought in architecture.
- To give exposure to the critiques of modern architecture.
- To study in detail the different postmodern directions in architecture.
- To give an outline of architectural approaches across the world from late 20th century.
- To give an understanding of the trajectory of post-independence architecture of India till the present.

### **UNIT I MODERN ARCHITECTURE – SPREAD AND LATER DIRECTIONS 8Hrs**

Brutalism. Team X. Ideas, works and evolution of Philip Johnson, Louis Kahn, Paul Rudolph, Eero Saarinen, SOM, Eames, I.M.Pei. Modern architecture and postindependence India - national building, institutions and PWD architecture. Chandigarh. Outline of evolution of the architectural profession in India, influences on architects. Works of Kanvinde, Habib Rehman. Corbusier and Kahn in India. Evolution and early works of Raje, Correa and Doshi.

### **UNIT II AFTER MODERNISM I**

**7Hrs**

Outline of changes in society after the 1960s characterized as condition of postmodernity, to include the realms of economics, technology, culture, society and environment. Critique of modernist cities by Jane Jacobs. Theories and works of Christopher Alexander. Aldo Rossi's ideas on the city. Neorationalism. Semiology and Postmodernism. Writings of Venturi. Works of Venturi Scott Brown, Graves and Moore.

### **UNIT II AFTER MODERNISM II & III**

**10Hrs**

Urban ideas/works of Soleri, Archigram and Metabolism. High Tech architecture, works of Stirling, Rogers and Piano. Deconstructivism as new architectural movement. Ideas and works of Eisenmann, Hadid, Gehry, Libeskind, Tschumi. Critical Regionalism as a category of architecture. Ideas and works of Fathy, Ando, Bawa, Barragan, Siza. Outline of contextual approaches in Indian architecture after the 60s. Works of Raje, Doshi, Correa, Raj Rewal. Philosophy and works of Nari Gandhi, Laurie Baker.

### **UNIT IV CONTEMPORARY ARCHITECTURE**

**12Hrs**

Overview of larger changes in society from late 20th century and their influence on architecture. Outline of architecture related to parametric design and digital processes, sustainability, globalisation, phenomenology, complexity. Ideas and works of ZHA, contemporary Dutch architecture, Bjarke Engels and BIG, OMA and Rem Koolhaas, Steven Holl, Mc Donough, Yeong, Zumthor, Pallasma, Murcutt. Outline of contemporary architecture in the non-Western world. Large scale changes in India from the 90s. Outline of post 1990s architecture of India.

### **UNIT V CONTEMPORARY TRENDS IN INDIA**

**8Hrs**

Trends in Architecture in India after Independence. Influence of Le Corbusier and Louis.I.Khan. Studies of the ideas and works of B.V.Doshi, Charles Correa, Raj Rewal, J.A.Stein, Achyut Kanvinde, Anant Raje, Uttam Jain, Hasmukh Patel, Laurie Baker, Chandravarkar & Thacker,

Hafeez Contractor, Nari Gandhi, ShirishBeri, Romi Khosla, Ranjit Sabiki, Anil Laul, Shashi Bhooshan, Jaisim, Bimal Pateletc.

**Total: 45 Periods / Hours**

## **OUTCOMES**

**CO1:** An awareness of the spread and varied later directions of modern architecture across the world.

**CO2:** An understanding of architectural production from the 1960s as driven by large scale changes across the world.

**CO3:** Familiarity with contemporary forces and directions in architecture across the world.

**CO4:** An understanding of postindependence architecture in India contemporaneous with the rest of the world, along with its own particular influences.

<b>AART3125</b>	<b>BUILDING MATERIALS &amp; CONSTRUCTION V</b>	<b>L</b>	<b>T</b>	<b>P/S</b>	<b>C</b>	<b>Total Marks</b>
		<b>1</b>	<b>0</b>	<b>2</b>	<b>3</b>	<b>100</b>

## **OBJECTIVES**

- To give an introduction to metals, predominantly iron and in building construction.
- To give an overview about glass and plastics, especially in building envelope/ roofing.
- To give detailed knowledge about the principles, methods of construction and applications of steel in building construction.
- To enable design and detail using steel, glass and plastic in buildings.

### **UNIT I GLASS**

**12Hrs**

Glass as a building material. Brief history of its use through examples. Manufacture, properties and uses of glass. Types of glass - float glass, cast glass, glass blocks, foamed glass, decorative glass, solar control, toughened glass, wired glass, laminated glass, fire-resistant glass, glass blocks, structural glass. Glass and energy efficiency in buildings. Application of glass in building industry. Introduction to curtain wall glazing. Current innovations. Understanding of product literature/ shop drawings. Site visits with documentation in the form of sketches/ photos.

### **UNIT II PLASTICS**

**12Hrs**

Plastic as a building material. Brief history of their use through examples. Manufacture, properties, types, uses and application of plastics in building industry. Different types of adhesives and sealants. Plastic joints. Specific materials such as polycarbonate sheet and teflon. Introduction to plastic based products in building construction such as such as doors, windows, ventilators, partitions, floors, walls, roofs, handrails. Current innovations. Understanding of product literature/ shop drawings. Site visits with documentation in the form of sketches/ photos.

### **UNIT III PROTECTIVE FINISHES AND DECORATIVE COATINGS**

**12Hrs**

Paints - ingredients, types, applications, properties and uses in buildings - painting on different surfaces - defects of painting - special purpose paints - bituminous, luminous, fire retardant and resisting paints –properties. Uses and applications of varnishes, lacquers and wall putty-Current development and specifications - Introduction, different types, properties, uses and applications of shellac properties, uses and applications polyurethane, enamel, plastic acrylic emulsion. Site visits with documentation in the form of sketches/ photos.

### **UNIT IV ADVANCED CONSTRUCTION TECHNIQUES AND MATERIALS**

**12Hrs**

Advanced concrete building components and construction techniques. To include folded plates, shell structures, vaults, domes. Their composition, construction and finishing. Insulated concrete forms (ICF). Recent trends in roofing materials like corrugated GI Sheets, pre-coated metal sheets. Composite walls, pneumatic structures, tensile structures, corrugated hyparshells, single layer reticulated shells, tension hybrid membranes, sustainable steel (preco beams, cellular beams, composite slim floor beam). Drawings/ sketches/ models of the principles. Understanding of detailed drawings/ published work. Site visits with documentation in the form of sketches/ drawings/ photos.

## **UNIT V DESIGN USING ADVANCED CONSTRUCTION TECHNIQUES AND MATERIALS**

**12Hrs**

Design and detailing exercise involving advanced construction techniques and materials outlined in the previous unit. The emphasis would be on innovative ways to use their principles in an appropriate typology involving a simple scale project. Design and construction details in the form of sketches and models.

**Total: 60 Periods / Hours**

### **OUTCOMES**

**CO1:** Knowledge of glass, plastics, paints and finishes in building construction.

**CO2:** Familiarity with advanced materials and construction techniques.

**CO3:** Ability to use advanced materials and construction techniques in innovative ways.

### **TEXTBOOKS**

<b>AART3126</b>	<b>BUILDING SERVICES III</b>	<b>L</b>	<b>T</b>	<b>P/S</b>	<b>C</b>	<b>Total Marks</b>
		<b>2</b>	<b>0</b>	<b>1</b>	<b>3</b>	<b>100</b>

## **OBJECTIVES**

- To give exposure to the science behind air-conditioning systems, the different types and applications.
- To enable understanding of architectural aspects related to air-conditioning systems and take appropriate design decisions.
- To inform about fire protection, fire safety and fire fighting in buildings and how to plan for the same
- To inform about mechanical transportation systems for buildings and how to plan for the same.

### **UNIT I AIR CONDITIONING – PRINCIPLES AND SYSTEMS**

**9Hrs**

Introduction to A/C conditions - basic of refrigeration systems - components of refrigeration system - compressor, condenser - control devices, evaporator- filters cooling tower - Vapour compression cycle - Concepts of cooling, transmission heat load - internal heat gain - concepts of zoning - room air distribution - types of outlets.

### **UNIT II DESIGN ASPECTS OF AIRCONDITIONING SYSTEMS**

**9Hrs**

Configuring/ sizing of mechanical equipment, equipment and spaces for them. Exercise on the above through choice, calculations, layout, drawings.

a) Air conditioning system for small buildings - window types, evaporative cooler, packaged terminal units and through the wall units split system

b) Systems for large building - Chilled water plant - All Air system, variable air volume, all water system Configuring/ sizing of mechanical equipment, equipment spaces and sizes for chiller plant, cooling tower, Fan room, Circulation Pumps, Pipes, ducts.

### **UNIT III FIRE SAFETY: DESIGN AND GENERAL GUIDELINES**

**8Hrs**

Principles of fire behavior, Fire safety design principles \_ NBC Planning considerations in buildings - non-combustible materials, egress systems, Exit Access - Distance between exits, exterior corridors - Maximum travel distance, Doors, Smoke proof enclosures. General guidelines for egress design for Auditoriums, concert halls, theatres, other building types, window egress, accessibility for disabled- NBC guidelines - lifts lobbies, stairways, ramp design, fire escapes and A/C, electrical systems.

Heat smoke detectors - sprinkler systems, Firefighting pump and water requirements, storage - wet risers, Dry rises, Fire extinguishers & cabinets, Fire protection system - CO2 & Halon system, Fire alarm system, snorkel ladder.

### **UNIT IV MECHANICAL TRANSPORTATION SYSTEMS IN BUILDINGS**

**10Hrs**

Lifts and escalators - types and applications. Round trip time for lifts. Design of lift lobby and vertical transportation core. Conveyors, travellers', dumb waiters. Standards for all.

Latest technologies in vertical transport systems. Integration of lifts and escalators with building automation systems. Understanding all the above through product literature/ field visits. Design exercise on the above through choice, calculations, layout and drawings.

## UNIT V ACOUSTICS

9Hrs

Fundamentals – Sound waves, frequency, intensity, wave length, measure of sound, Decibel scale, speech and music frequencies, Reverberation time. Acoustics and building design-site selection, shape volume, treatment for interior surfaces, basic principles in designing open air theatres, cinemas, broadcasting studios, concert halls, class rooms, lecture halls, schools, residences, office buildings including constructional measures and sound reinforcement systems for building types – case studies

**Total: 45 Periods / Hours**

### OUTCOMES

**CO1:** Familiarity with different air conditioning systems, their context of use and basics of planning involved.

**CO2:** An understanding of fire safety, firefighting, fire prevention and installations in buildings.

**CO3:** An understanding of mechanical transportation systems in a building.

**CO4:** Ability to integrate services in buildings.

<b>AARP3108</b>	<b>ARCHITECTURAL DESIGN V</b>	<b>L</b>	<b>T</b>	<b>P/S</b>	<b>C</b>	<b>Total Marks</b>
		<b>5</b>	<b>0</b>	<b>10</b>	<b>15</b>	<b>100</b>

## OBJECTIVES

- To introduce buildings as consumers of resources for human needs and to enable responsible, creative addressing of this fact through design choices.
- To enable an understanding of architectural design as integrating diverse functional concerns in a building through analysis and innovation.
- To impart training in the resolving of spatial considerations with other physical aspects such as structures, services and climate.

## CONTENT

Architecture is a man-made addition to the world and is resource intensive. The questions in this regard are how to simplify needs and means. Further, architecture today is also required to integrate several physical concerns in a building as human needs in built environment have become more complex with respect to intensity, distribution and interdependency of activities/ programmes. Here the challenge is to address complex needs in an efficient manner so as to conserve/ optimize resources without compromising on quality of life. The approach and projects will be directed towards one or more of these concerns. Appropriate tools and techniques related to the above can be used in study and design, especially in terms of technical aspects. The nature of projects can be either or both of these- 1) simple scale, ordinary or special use projects examining design through resources of different types 2) large, complex projects (multi storeyed buildings, office complexes, buildings for healthcare, performing art centre, etc.,) that need technical resolution and/or balance of various aspects. Aspects to be addressed can be urban land as resource, planning integration and detailing, sustainable building practices, green issues, alternative energy, intelligent building techniques and service integration, advanced building practices, appropriate materials and construction, sensitive and optimal use of resources. The number of projects is left to the discretion of the faculty based on scale and complexity.

**Total: 150 Periods / Hours**

## OUTCOMES

**CO1:** Ability to critically understand and address issue of resources.

**CO2:** Ability to balance diverse aspects/concerns of buildings by making informed choices and innovative design in the context of buildings with intense or complex programmes.

**CO3:** Ability to apply knowledge intensively in realms such as sustainable built environment, services.

## VII SEMESTER

<b>AART4127</b>	<b>HUMAN SETTLEMENTS &amp; PLANNING</b>	<b>L</b>	<b>T</b>	<b>P/S</b>	<b>C</b>	<b>Total Marks</b>
		<b>3</b>	<b>0</b>	<b>0</b>	<b>3</b>	<b>100</b>

### OBJECTIVES

- To introduce the vocabulary, elements and classification of human settlements.
- To give exposure to planning concepts at different scales of settlements.
- To give an understanding of planning addressing current issues.
- To introduce planned cities as expressions of specific intent.
- To give exposure to changes in human settlements today.

### **UNIT I INTRODUCTION AND FORMS TO HUMAN SETTLEMENTS 9Hrs**

Introduction to planning as a discipline and brief evolution of the profession. Elements of human settlements. Human beings and settlements. Nature, shells and networks- their functions and linkages. Anatomy and classification of human settlements- locational, resource based, population size and occupational structure.

Structure and form of settlements - linear, non- linear and circular, combinations. Reasons for development. Advantages and disadvantages. Case studies.

### **UNIT II RURAL AND REGIONAL DEVELOPMENT IN INDIA 7Hrs**

Factors influencing the growth and decay of human settlements.

Rural development plans, programmes and policies from case studies. Regional Plan. Area delineation, land utilisation plan, hierarchical system of settlements, their sizes and functions.

### **UNIT III URBAN PLANNING AN URBAN RENEWAL 9Hrs**

Introduction to urban planning in India. Scope, content and limitations of master plan. Structure plan, DDP/ZDP, planned unit development. Development control rules. Urban renewal, redevelopment, rehabilitation and conservation. Urban development projects – case studies.

### **UNIT IV ASPECTS IN CONTEMPORARY URBAN PLANNING IN INDIA 12Hrs**

Globalization and its impact on cities. Sustainable planning concepts. New forms of developments, to include self-sustained communities, SEZ, transit-oriented development (TOD), integrated townships, smart cities. Case studies.

### **UNIT V CITIES IN INDIA, MODERN AND POSTMODERN CITIES 8Hrs**

Ancient town planning principles of India. Medieval Indian cities and factors that led to their Development. Colonial urbanism including presidency towns, hill towns and cantonments Contributions of Ebenezer Howard, Lewis Mumford, Patrick Geddes, C.A. Doxiadis. Visionary/ Utopian city concepts by Le Corbusier, Frank Lloyd Wright

**Total: 45 Periods / Hours**

### OUTCOMES

- CO1:** Ability to understand morphology of settlements and their generating forces and characteristics.
- CO2:** An understanding of the role of planning processes in making positive changes to settlements.
- CO3:** Awareness of planning interventions with respect to the current world.
- CO4:** Awareness of the nature and characteristics of human settlements.

**CO5:** Familiarity with current aspects of settlements.

<b>AART4128</b>	<b>PROFESSIONAL PRACTICE &amp; ETHICS</b>	<b>L</b>	<b>T</b>	<b>P/S</b>	<b>C</b>	<b>Total Marks</b>
		<b>3</b>	<b>0</b>	<b>0</b>	<b>3</b>	<b>100</b>

## **OBJECTIVES**

- To give an introduction to the architectural profession and the role of professional bodies and statutory bodies as well as ethics of the profession.
- To give familiarity with basic aspects of running an architectural practice.
- To give exposure to the processes involved in taking up and completing an architectural project.
- To inform about legal aspects and legislations associated with the profession.
- To give exposure to the larger implications of professional practice in the globalised world today.

### **UNIT I INTRODUCTION TO ARCHITECTURAL PROFESSION CODE OF CONDUCT AND ETHICS** **9Hrs**

Architectural profession and role of architects in society. Registration of architects. Role of the Indian Institute of Architects. Architects Act 1972- intent, objectives, provisions with regard to architectural practice. Council of Architecture- role and functions. Importance of ethics in professional practice. Code of conduct for architects. Punitive action for professional misconduct of an architect. Architecture as a professional service towards clients. Architect's office and its management - organisational structure, infrastructure requirement, skills required, elementary accounts, tax liabilities. Setting up architectural practice.

### **UNIT II ARCHITECT'S SERVICES, SCALE OF FEES & COMPETITIONS** **9Hrs**

Mode of engaging an architect. Comprehensive services, partial services and specialized services. Scope of work of an architect. Schedule of services. Scale of fees - Council of Architecture norms. Mode of payment. Terms and conditions of engagement. Letter of appointment. Importance of Architectural competitions. Types of competitions - open, limited, ideas competition, single and two stage competitions. Council of Architecture guidelines for conducting architectural competitions. National and international Competitions. Case studies.

### **UNIT III PROJECT MANAGEMENT - TENDER & CONTRACT** **9Hrs**

Tender - Definition. Types of Tenders - open and closed tenders. Conditions of tender. Tender notice. Tender documents. Concept of EMD. Submission of tender. Tender scrutiny. Tender analysis. Recommendations. Work order. E-tendering - advantages, procedure, conditions. Contract – definition. Contract agreement and its necessity. Contents - articles of agreement, terms and conditions, bills of quantities and specifications, appendix. Certification of contractors. Bills at different stages. New trends in project formulation and different types of execution - BOT, DBOT, BOLT, BOO, etc., Role of architect in project execution stage.

### **UNIT IV LEGAL ASPECTS** **9Hrs**

Arbitration - definition and advantages. Sole and joint arbitrators. Role of umpires, award. Arbitration clause in contract agreement -role of architect, excepted matters. Easement – meaning, types of easements. Copy rights and patenting – provisions of copy right acts in India, copy right in architectural profession. Consumer Protection Act - intent, architects' responsibility towards his clients.

## **UNIT V IMPORTANT LEGISLATIONS AND IMPLICATIONS OF GLOBALISATION IN ARCHITECTURAL PRACTICE**

**9Hrs**

Planning parameters at various scales. DTCP rules. Second Master Plan CMDA as case study. Chennai Corporation Building Rules 1972. Panchayat Rules. Building rules in National Building Code. Factories Act. Persons with Disabilities Act. Barrier Free Environment. Coastal Regulation Zone. Heritage Act. Globalisation and its impact on architectural profession. Preparedness for international practice. Entry of foreign architects in India. Information technology and its impact on architectural practice. Emerging specializations in the field of architecture -architect as construction/ project manager, architectural journalism, architectural photography.

**Total: 45 Periods / Hours**

### **OUTCOMES**

**CO1:** Knowledge of the role of professional and statutory bodies.

**CO2:** An understanding of the provisions in Architects Act 1972.

**CO3:** An understanding of code of conduct.

**CO4:** Familiarity with the process and role of an architect in project execution.

### **TEXTBOOKS**

- Architects Act 1972.
- Publications of Council of Architecture
- Roshan Namavati, 'Professional Practice', Lakhani Book Depot, Mumbai, 2016.
- Ar. V.S. Apte, 'Architectural Practice and Procedure', Mrs. Padmaja Bhide, 2008.

<b>AART4129</b>	<b>SPECIFICATION, ESTIMATION AND VALUATION</b>	<b>L</b>	<b>T</b>	<b>P/S</b>	<b>C</b>	<b>Total Marks</b>
		<b>3</b>	<b>0</b>	<b>0</b>	<b>3</b>	<b>100</b>

## **OBJECTIVES**

- To enable understanding with respect to quality and quantity of materials, quantity and classes of skilled and unskilled labours, and tools and plants required for projects.
- To give an understanding of how to draw up specifications for the different items of a building project and also to prepare the schedule of programming of the project.
- To give knowledge on how to prepare approximate as well as detailed estimates and to have a clear picture of the project expenditure.
- To help calculate the exact quantities of items of work done for effecting payment especially when direct measurements are difficult and also to determine the quantities of different materials required for various items of work.
- To give understanding of how to prepare valuation report of real and landed property.
- To give exposure to budgeting in projects.

### **UNIT I SPECIFICATION AND SPECIFICATION WRITING**

**9Hrs**

Necessity of specification, importance of specification. How to write specification. Types of Specification. Principles of Specification writing. Important aspects of the design of specification. Sources of information. Classification of Specification. Brief Specification for 1st class, 2nd class, 3<sup>rd</sup> class building. Detailed specification for earthwork excavation, plain cement concrete, reinforced concrete, first class and second-class brickwork, damp proof course, ceramic tiles/marble flooring and dado, woodwork for doors, windows frames and shutters, cement plastering, painting & weathering course in terrace.

### **UNIT II ESTIMATION**

**9Hrs**

Types & purpose. Approximate estimate of buildings. Bill of quality, factors to be considered. Principles of measurement and billing. Contingencies. Measurement of basic materials like brick, wood, concrete and unit of measurement for various items of work. Abstract of an estimate. Costs associated with constructed facilities. Approaches to cost estimation. Type of construction cost estimates. Cost Indices. Applications of cost indices to estimating. Estimate based on engineer's list of quantities. Estimation of operating costs.

### **UNIT III DETAILED ESTIMATE**

**9Hrs**

Deriving detailed quantity estimates for various items of work for a single storied building. To include earthwork excavation, brick work, plain cement concrete, reinforced cement concrete works, wood work, iron works, plastering, painting, flooring, weathering course.

### **UNIT IV VALUATION AND CURRENT TRENDS**

**9Hrs**

Valuation. Explanation of terms. Types of values. Sinking fund. Years of purchase. Depreciation. Types of depreciation. Valuation of real properties. Types, methods and purpose of valuation. Methods of contracting and its link to specification drafting - the Business Environment and the structure in practice– Case studies

### **UNIT V BUDGETING**

**9Hrs**

Elements of cash flow. Time value of money. Capital investment decision. Types of business firms. Budget and Budgetary Control. Types of Budgets. Preparation of financial budget.

**Total: 45 Periods / Hours**

## **OUTCOMES**

**CO1:** An understanding of the art of building construction through specification writing.

**CO2:** Ability to work out the approximate estimate and detailed estimate for small scale building projects and low-cost housing.

**CO3:** An understanding of valuation and budgeting.

## **TEXTBOOKS**

- PWD Standard Specifications. Govt Publication.

AART4130	ARCHITECTURAL DESIGN DETAILING	L	T	P/S	C	Total Marks
		1	0	2	3	100

## OBJECTIVES

- To introduce various aspects involved in the construction of buildings through the understanding of different types of architectural and technical drawings.
- To enable the understanding of architectural design as integrating spatial and technical concerns.
- To enable development of an architectural design project into schematic drawings through integrating concerns of structure, construction and services.
- To create architectural drawings for construction and as a base for structures and services drawings.
- To design, incorporate and detail architectural and interior components of the architectural design project.

## UNIT I UNDERSTANDING ARCHITECTURE THROUGH BUILDING DRAWINGS

12Hrs

Understanding architecture as a physical, workable product through study of comprehensive set of drawings for any live building project, interpreting them and presenting their characteristics through seminars/ assignments. The drawings to be studied should include architectural working drawings from macro to micro scale- site plan, building plans, staircase details, kitchen and toilet detail of joinery, etc., structural drawings and service drawings to include electrical, plumbing, mechanical and HVAC details.

## UNIT II SCHEMATIC DESIGN INTEGRATING ARCHITECTURAL DESIGN WITH STRUCTURAL AND SERVICE CONSIDERATIONS

12Hrs

Evolving a conceptual design project into schematic design, balancing different technical considerations. Considerations to include appropriate structural, plumbing, electrical, mechanical and HVAC systems. Working out schemes to decide and finalise on the best possible design that integrates everything together. Scale of the project could be small to medium and include any typology, involving a newly created, quick, simple design or an older design from previous academic years.

## UNIT II ARCHITECTURAL WORKING DRAWINGS

12Hrs

Preparation of architectural working drawings for the resolved schematic design. Drawings to include site plan, centre line drawings, building drawings, detailed drawings of specific areas like staircases and wall sections, dimensions explaining the various components, joinery schedule.

## UNIT IV DETAILED DRAWINGS OF ROOMS AND ARCHITECTURAL COMPONENTS

12Hrs

Design and preparation of detailed drawings of joinery including doors, windows and ventilators. Design and preparation of layouts of service intensive rooms like kitchens and toilets. Design and detailing out of floor, wall and ceiling finishes/ construction/ laying.

## UNIT V DETAILED DRAWINGS OF BUILT IN COMPONENTS

12Hrs

Design and preparation of detailed drawings of built in furniture and components based on the room/ typology to include counters, cabinets, wardrobes, storage, fittings and fixtures, display units, workstation.

**Total: 60 Periods / Hours**

## **OUTCOME**

**CO1:** An understanding of all the aspects that go into the making of a building through study of drawings related to construction.

**CO2:** Ability to resolve spatial concerns with technical aspects of a building.

**CO3:** Ability to design and detail components within a building.

## **TEXTBOOKS**

<b>AARP4109</b>	<b>ARCHITECTURAL DESIGN VI</b>	<b>L</b>	<b>T</b>	<b>P/S</b>	<b>C</b>	<b>Total Marks</b>
		<b>1</b>	<b>0</b>	<b>2</b>	<b>3</b>	<b>100</b>

## **OBJECTIVES**

- To enable an understanding of architecture as having the capacity to critically interpret and transform status quo in the built environment and society through the act of design.
- To guide in the taking of critical/ philosophical/ ideological positions relating to specific design situations in the current world and to explore architectural morphology as an expression of those positions.

## **CONTENT**

Architecture as a discipline balances many concerns in the creation of buildings. However, it also represents ideas and production reacting to/ reinforcing/ anticipating/ transforming specific aspects of the existing world towards a more desirable future. This could spring from individual perspectives as well as through concerted efforts which then become movements. Architecture can thus seek to understand, reflect, strengthen, question, change status quo. The process of design can thus offer a possible, intended future. Projects/ design situations will be given in this regard which address issues/ programmes of current society with a larger impact in terms of scale or importance. Different realms/ aspects of contemporary life can be explored. Some possible projects/ area of inquiry are institutional campuses of significance, mixed use projects involving diverse user groups, culturally and socially important buildings, urban life, technological developments, culture, globalisation, place, meaning, identity, appropriate architecture, etc., Suitable processes can be engaged for critical and creative thinking which could include wide and interdisciplinary reading to take critical positions, contemporary processes such as mapping and diagramming, methods related to social, technical or empirical aspects, etc., The particular line of thought will be taken through to completion through the processes. It is preferable to have one major project with small exercises under it if required.

**Total: 150 Periods / Hours**

## **OUTCOMES**

**CO1:** Ability to understand the wider implication of design decisions and their interdependency with larger processes of society.

**CO2:** Ability to take creative, critical and informed decisions in the context of significant projects that could shape society in positive ways.

## VIII SEMESTER

AARP4111	PRACTICAL TRAINING	L	T	P/S	C	Total Marks
		6	0	10	16	100

### OBJECTIVES

- To introduce the challenges of architectural practice.
- To enable overall understanding of different stages in real life architectural projects in practice.
- To create involvement in these stages as much as possible within the scope of a specific architectural practice - initiation of project, development of concepts into schematic drawings, approval process, presentations and working drawings, involvement in office discussions and client meetings, integrating structural and service concerns, estimation and tendering processes, site supervision and coordination in the construction process.

### CONTENT

Practical Training will be done in offices/ firms in India, empanelled by the institution, in which the principal architect is registered with the Council of Architecture. The student will attempt to learn as much of aspects outlined in the objectives, either first hand or indirectly.

The progress of practical training will be assessed periodically internally through submission of log books along with work done by the students in terms of drawings, reports, etc., along with the regular progress report from the employers.

The students will be evaluated based on the criteria related to their contribution in the office some of which are given below.

- Understanding and involvement in the process of architectural practice as mentioned in the objectives within the scope of the specific office in which training is undertaken.  
Adherence to time schedule, overall responsibility and professional conduct.
- Ability to carry out the instructions on preparation of schematic drawings, presentation drawings, working drawings and skill in this regard.
- Ability to work as part of a team in an office and contribute to related activities.
- Ability to participate in client meetings and discussions.
- Involvement in supervision at project site.
- Involvement/ initiative/ participation in any other aspects during the course of the training.
- At the end of the Practical Training, a portfolio of work done during the period of internship along with certification from the office should be submitted for evaluation through a viva voce examination.

**Total: 90 Working Days**

### OUTCOMES

**CO1:** An overall idea of the nuances of architectural practice.

**CO2:** An understanding about the total process that goes into the making of a building.

**CO3:** Maturity in using the experience gained from internship in the thesis project.

## IX SEMESTER

AART5131	DISSERTATION	L	T	P/S	C	Total Marks
		3	0	0	3	100

### OBJECTIVES

- To inculcate the spirit of research in architecture.
- To enable the acquisition of in-depth knowledge in a specific aspect/ issue in the discipline of architecture as well as develop perspectives on the same through reading, study, analysis and thought.
- To facilitate the development of a coherent line of thinking and express it through clear writing.
- To serve as prelude to Thesis.

### CONTENT

Design studio emphasis on explaining and understanding architecture primarily through the mode of making. However, architecture as a field itself is driven by explicitly stated or implicitly understood ideas/ points of view of particular society and individuals. Dissertation offers an opportunity to look at architecture, history and design through ideas, texts and intent behind works. It involves process of observation, reflection and abstraction. Students are encouraged to choose any topic of their interest.

Topics may range from analysing the works of an architect, history, typological changes, writing, design process and many more. They could involve research based on primary sources in terms of doing actual field studies and/or secondary sources through reading. The dissertation proposal in about 1500 words stating the topic, issues to be explored and the scope must be submitted for approval. Work on the approved topic should start from the beginning of the semester and would be periodically reviewed. At the end of the semester, a well written report of a minimum 10,000 words should be submitted in the prescribed format, if any, provided by the University. The suggested structure for the report can be - outline/ background of the area of study, statement of objectives or research questions within the area of study, outline of methodology/ way to achieve the objectives or answer the questions of research, core section with necessary content such as documentation, analysis, arguments, etc., final conclusion. The report will be presented in the viva-voce exam and defended.

**Total: 135 Periods / Hours**

### OUTCOMES

**CO1:** A dissertation report which is based on accepted norms of technical writing.

**CO2:** Ability to research deeply into a subject and develop a coherent line of thought based on point of view, observation, analysis and study.

**CO3:** Ability to look at architecture from an informed, analysed and well thought out critical perspective which would help strengthen the thesis process.

### TEXTBOOKS

- Iain Borden and Kaaterina Ruedi; 'The Dissertation: An Architecture Student's Handbook', Architectural Press, 2000.
- Linda Grant and David Wang, 'Architectural Research Methods', John Wiley Sons, 2001.

<b>AART5132</b>	<b>URBAN DESIGN DEVELOPMENT</b>	<b>L</b>	<b>T</b>	<b>P/S</b>	<b>C</b>	<b>Total Marks</b>
		<b>3</b>	<b>0</b>	<b>0</b>	<b>3</b>	<b>100</b>

## **OBJECTIVES**

- To create an understanding of urbanism and urban morphology as rising from various forces through history.
- To introduce the components of the modern city and their interdependencies.
- To introduce the scope and nature of urban design as a discipline
- To introduce key theories associated with urbanism and cities.
- To create awareness of contemporary urban issues and how they are addressed.
- To give exposure to ways of perceiving, documenting and analysing cities.

### **UNIT I: URBANISM IN HISTORY**

**9Hrs**

Outline of forces shaping urbanism. Urbanism of river valley civilisations. Morphology of pre-industrial European cities to include Greek and Roman cities, medieval European towns, Renaissance urbanism and ideal cities. Outline of historic cities of India. Temple town urbanism of Tamil Nadu. Mughal city form. Medieval cities of India. Colonial urbanism in India.

### **UNIT II: MODERN URBANISM**

**8Hrs**

Industrialization and impact on urbanism. American grid iron planning. Theories, ideas and practice of good urban planning/cities/urbanism in early 20th century. Outline of modernist cities and urbanism across the world. Morphology of Indian modernist cities of Chandigarh, Bhubaneswar and Gandhi Nagar.

### **UNIT III: UNDERSTANDING OF THE CONCEPT OF URBAN DESIGN THROUGH TEXTS AND THEORIES**

**9Hrs**

Introduction to and discussion of key texts and theories of cities and urbanism - Need for urban design – different realms attached to urban design  
Imageability and Lynch, Townscape and Cullen, Genius Loci and Schulz, historic city and Rossi, social aspects of urbanism and the works of Jane Jacobs, William Whyte and Jan Gehl, Collage City and Colin Rowe, current theories and texts.

### **UNIT IV: ELEMENTS AND APPROCHES OF URBAN DESIGN**

**7Hrs**

Urban scale, Mass and Space; Understanding components of urban fabric; Making a Visual survey; Understanding the various urban spaces in the city and their hierarchy. Special focus on streets; Expressive quality of built forms, spaces in public domain

### **UNIT V: URBAN LANDSCAPING OF FUNCTIONAL AREAS**

**12Hrs**

Organization of spaces – circulation, built form and open spaces, site planning and micro climate, site planning for neighborhood parks, children's play area and campus development. Urban open spaces and principle of urban landscape; Street landscaping, Landscape design for waterfront areas and functional areas in urban centers; green roofs and walls – case studies at National and International levels

**Total: 45 Periods / Hours**

## **OUTCOMES**

**CO1:** Awareness of the evolution and characteristics of urban forms, their components and interdependencies.

**CO2:** Understanding of urbanism through theories, aspects, issues and solutions.

**CO3:** Knowledge of ways to look at and interpret urbanism today.

**CO4:** Have a comprehensive knowledge on the evolution of urban planning and its relation today.

**CO5:** Be equipped to handle the urban design studio project at a town/city, region level from the studies, analysis, and interpretation and design in accordance to the juries' prudence.

### **TEXTBOOKS**

<b>AARP5112</b>	<b>ARCHITECTURAL DESIGN VII</b>	<b>L</b>	<b>T</b>	<b>P/S</b>	<b>C</b>	<b>Total Marks</b>
		<b>5</b>	<b>0</b>	<b>10</b>	<b>15</b>	<b>100</b>

## OBJECTIVES

- To enable an understanding of urbanism as a continuous experience involving the interrelated disciplines of architecture, urban design and town planning.
- To understand architecture as influenced by and influencing the dynamics of cities.
- To facilitate the taking of architectural design decisions in the context of the urban environment.

## CONTENT

Urbanism is a dynamic phenomenon involving many aspects - urban growth, landuse distribution and change, urban form, demographics including gender and class, cultural aspects such as place and heritage, physical infrastructure such as roads and transportation nodes, public spaces, etc., Architecture is an integral and large part of urbanism, shaping and being shaped by it. It can serve to include/ gather society and enrich the urban environment in a seamless manner. Understanding of this aspect of architecture will be achieved by architectural projects involving interdependencies between architecture and the city. Some of the issues and areas that could be addressed are- transportation nodes, heritage areas, adaptive reuse, suburban sprawl, place making, identity, collective memory, mixed use programming, large scale urban interventions, revitalisation and renewal of urban fragments, urban waterfront development, urban nodes, multiuse urban complexes.

The tools and techniques can include contemporary ways/ tools of perceiving, gathering and analysing data, inclusive, collaborative and participatory approaches, etc., It is preferable to have one major project with small exercises under it if required.

**Total: 135 Periods / Hours**

## OUTCOMES

**CO1:** Ability to perceive and design buildings as contributing to/ transforming the urban fabric.

**CO2:** Ability to bring inclusivity into the architectural design process.

## TEXTBOOKS

- Jonathan Barnett, 'An Introduction to Urban Design', Harper and Row; 1982

## X SEMESTER

AARP5113	THESIS	L	T	P/S	C	Total Marks
		7	0	10	17	100

### OBJECTIVES

- To ensure consolidation and application of the knowledge gained in preceding years of the programme in the context of a design project of the student's choice.
- To enable addressing of specific projects through key, identified issues inherent in the project or to enable development of thought processes in specific areas/aspects into a project.
- To facilitate development of ability to complete and handle projects independently as a precursor to professional life.

### CONTENT

Students should choose a topic of their choice in terms of design potential and/ or idea exploration to be taken up for completion. The topic could be project based with specific areas of study/ approach or study/ approach based leading to a project. If the latter, care should be taken to choose topics that can lead to sufficient architectural design component.

Students should submit the topic for approval with a rough outline of the nature of the project, area of interest, study and design scope, challenges, possible case studies, methodology and outcome. The areas of study/research/design can include any of the broad areas of the discipline – contemporary needs of society, history, theory, sustainability, structural or service-oriented design, projects that involve complex planning and integration of several aspects, appropriate architecture, urban design, contemporary processes, social housing, urban oriented architectural design, conservation oriented architectural design, etc. The progress of work will be reviewed periodically throughout the semester. At the end of the semester, students should submit the final thesis project for the viva voce exam. The final submission will comprise of study sheets, optional study models, design approach sheets, optional design process models, design presentation sheets, final model, detailed drawings of an important part of the project, project report summarising the entire thesis work and soft copy of all the work.

**Total: 345 Periods / Hours**

### OUTCOMES

**CO1:** Skill, knowledge and expertise in the domain of architectural design.

**CO2:** Ability to handle a major architectural project independently through all stages.

### TEXTBOOKS

- Linda Grant and David Wang, 'Architectural Research Methods', John Wiley & Sons, 2002.
- Joseph De Chiara, Michael J Crosbie, 'Time Saver Standards for Building Types', McGraw Hill Professional, 2001.

## ELECTIVES

### PROFESSIONAL ELECTIVE I (III YEAR VI SEM)

AART2118	COMPUTER APPLICATIONS	L	T	P/S	C	Total Marks
		3	0	0	3	100

#### OBJECTIVES

- To give understanding of design as a broader field and the changing role of designer in society.
- To give exposure to methodologies, theories and models of the design process.
- To give deeper understanding of the process of creativity as well as to introduce techniques which will enable creative thinking.
- To help understand creativity with respect to the discipline of architecture.
- To introduce participatory approach to design.

#### UNIT I

9Hrs

Isometric views, perspectives, manipulation of camera angles, viewpoints, etc

#### UNIT II

9Hrs

Rendering 3D views using material palettes, colours, textures, shades and shadows. Inserting objects from digital libraries and other sources, using software such as 3DS Max

#### UNIT III

9Hrs

3D animation, walk-through sequences, superimposing animated videos over base images.

#### UNIT IV

9Hrs

Data-base management: Information filing and profiling, Technical Record-keeping and document transmission.

**Total: 36 Periods / Hours**

#### OUTCOMES

**CO1:** Ability to make photorealistic imagery of architectural objects with 3D CAD software through rendered perspective and walk-through presentations.

**CO2:** Basic programming and scripting for architectural applications will be introduced.

<b>AART3133</b>	<b>THEORY OF DESIGN</b>	<b>L</b>	<b>T</b>	<b>P/S</b>	<b>C</b>	<b>Total Marks</b>
		<b>3</b>	<b>0</b>	<b>0</b>	<b>3</b>	<b>100</b>

## **OBJECTIVES**

- To give understanding of design as a broader field and the changing role of designer in society.
- To give exposure to methodologies, theories and models of the design process.
- To give deeper understanding of the process of creativity as well as to introduce techniques which will enable creative thinking.
- To help understand creativity with respect to the discipline of architecture.
- To introduce participatory approach to design.

### **UNIT I INTRODUCTION TO DESIGN**

**12Hrs**

Definition and understanding of design. History of design process from earliest times through Renaissance, Beaux Arts, Bauhaus. Different classifications of design according to scale, process, mode of production, etc., - selfconscious/ unselfconscious, design through drawing/ design through craft, pragmatic/ iconic/ analogic/ canonic or syntactic, handmade/ machine made, product design to city design, functional/ aesthetic, nature vernacular/ technological.

### **UNIT II DESIGN METHODOLOGY MOVEMENT**

**10Hrs**

Context for the rise of the design methodology movement from the 1950s with the critique of modernism. Theories of the first generation and the second-generation design methodologists. Design as wicked problem. Escalation and regression in design. Summary by Johnson of various models of the design process - parametric or analysis/ synthesis/ evaluation, conjecture-refutation, paradigmatic, hermeneutical.

### **UNIT III CREATIVE THINKING**

**8Hrs**

Understanding the term creativity. Theories on thinking - left brain/ right brain, convergent/ divergent thinking, lateral/ vertical thinking. Broadbent's idea of the design spectrum - from the logical to chance. Blocks in creative thinking. Techniques to generate creativity as put forth by Broadbent, Bono.

### **UNIT IV ARCHITECTURAL CREATIVITY**

**7Hrs**

Types of architectural concepts - programmatic, analogic, metaphor, essence, etc., Channels to creativity in architecture as put forth by Antoniades. Personal philosophies and strategies of individual designers.

### **UNIT V PROCESS AND DESIGN**

**8Hrs**

People and design process- concept of pattern language by Christopher Alexander, participatory approach to design, design as process involving time and people. Introduction to contemporary processes in design including diagramming, mapping, parametric exploration, etc.,

**Total: 45 Periods / Hours**

## **OUTCOMES**

**CO1:** Ability to think about architecture as one of the many fields under the broader ambit of design as a fundamental human activity.

**CO2:** Self-awareness with respect to the creative process.

**CO3:** Ability to engage different processes to give creative output.

<b>AART3134</b>	<b>VERNACULAR ARCHITECTURE</b>	<b>L</b>	<b>T</b>	<b>P/S</b>	<b>C</b>	<b>Total Marks</b>
		<b>3</b>	<b>0</b>	<b>0</b>	<b>3</b>	<b>100</b>

## **OBJECTIVES**

- To introduce the study of vernacular architecture as a process and not a product.
- To provide an overview of the different approaches and concepts to the study of vernacular architecture.
- To study the various vernacular architecture forms in the different regions of the country.
- To look at the impact of colonial rule on the vernacular architecture of India.

### **UNIT I INTRODUCTION TO VERNACULAR ARCHITECTURE 7Hrs**

Definition and classification of vernacular architecture. Vernacular architecture as a process. Methodology for survey and study of vernacular architecture. Overview of cultural and contextual responsiveness of vernacular architecture.

### **UNIT II APPROACHES AND CONCEPTS 7Hrs**

Overview of different approaches and concepts to the study of vernacular architecture. Aesthetic, architectural and anthropological studies in detail.

### **UNIT III VERNACULAR ARCHITECTURE OF THE WESTERN AND NORTHERN REGIONS OF INDIA 9Hrs**

Forms, spatial planning, cultural aspects, symbolism, colour, art, materials of construction and construction technique of the vernacular architecture of the deserts of Kutch and Rajasthan (including havelis of Rajasthan), rural and urban Gujarat (including wooden mansions/ havelis in general and that of the Bohra Muslims) and geographical regions of Kashmir (including house boats).

### **UNIT IV VERNACULAR ARCHITECTURE OF KERALA AND TAMILNADU 12 Hrs**

Wooden houses, palaces and theatres in Kerala. Nair houses of Kerala - Nallukettu house - Padmanabapuram palace, Thackalai. Koothambalam, Introduction to Boat houses in Kerala Tribal Architecture in Tamil Nadu-Irula, Kurumba, Todas. Introduction to Chettinad Architecture, Architectural significance of Chettinad houses and palaces in Chettinad regions. Agraharams of Tamil Nadu-settlement Planning and materials and construction details.

### **UNIT V VERNACULAR ARCHITECTURE OF COLONIAL INDIA 10Hrs**

Colonial influences on the Traditional House, Goa, change from Bangla & Bungalow, Bengal and Victorian Villas - Planning Principles, materials & methods of construction House Typologies, settlement planning in Pondicherry & Cochin.

**Total: 45 Periods / Hours**

## **OUTCOMES**

- CO1:** An understanding of Indian vernacular architecture as a process and to also provide an overview of various approaches and concepts towards its study.
- CO2:** Knowledge of vernacular architectural forms in different regions.
- CO3:** An understanding of the impact of colonial rule on vernacular architecture in India.

## **TEXTBOOKS**

<b>AART3135</b>	<b>ART APPRECIATION</b>	<b>L</b>	<b>T</b>	<b>P/S</b>	<b>C</b>	<b>Total Marks</b>
		<b>3</b>	<b>0</b>	<b>0</b>	<b>3</b>	<b>100</b>

## **OBJECTIVES**

- To introduce art as a fundamental human activity, its characteristics and ways in which it can be understood.
- To introduce the vocabulary of art and to enable the appreciation of art.
- To understand different productions of art as manifestations within particular contexts.

### **UNIT I INTRODUCTION TO ART**

**7Hrs**

Definition of art, need for art, role of art. Art, reality, perception, representation. Categories of art in terms of media and technique. How to appreciate art in terms of form, content and context.

### **UNIT II VOCABULARY OF ART**

**9Hrs**

Introduction to the vocabulary of art constituted by elements (line, shape, form, space, colour, light, value, texture) and principles (unity, variety, harmony, rhythm, balance, proportion, emphasis, contrast, movement). Appreciation of art with respect to all the above through examples.

### **UNIT III BEGINNINGS OF WESTERN ART TO MODERN ART**

**10Hrs**

Outline of art in the West from the beginnings to the birth of modern art. Important works from the following art traditions will be understood and appreciated in terms of their form, content and context: Prehistoric Art, Egyptian and Mesopotamian art, Greek and Roman art, Medieval art, Renaissance and Baroque art, Neoclassicism, Romanticism, Realism.

### **UNIT IV MODERN ART AND AFTER**

**12Hrs**

Outline of the context for the major changes in art from late 19th century and the birth of modern art. Important works from the following movements will be understood and appreciated in terms of their form, content and context: Impressionism, Post Impressionism, Fauvism, Expressionism, Modern art, Abstract/ Non Objective art, Cubism, Dadaism, Surrealism, Futurism, Constructivism, Suprematism, De Stijl, Abstract Expressionism, Pop art, Op art. Outline of new forms and media in art from mid-20th century.

### **UNIT V INDIAN ART**

**7Hrs**

Outline of art in India over history. Important works from the following art traditions and movements will be understood and appreciated in terms of their form, content and context: Indus Valley art, Hindu, Buddhist and Jain art, Mughal and Rajput miniature art, art during the colonial period, modern Indian art, contemporary directions.

**Total: 45 Periods / Hours**

## **OUTCOMES**

**CO1:** An understanding and appreciation of art as basic and varied human creation related to cognition and experience.

**CO2:** Awareness of important art productions in the West and India.

**CO3:** Sensitivity towards collective and individual cultural productions as unique expressions of historical and geographic context.

Programme, Jaipur, 1985.

<b>AART3136</b>	<b>ROAD SAFETY &amp; CIVIC SENSE</b>	<b>L</b>	<b>T</b>	<b>P/S</b>	<b>C</b>	<b>Total Marks</b>
		<b>3</b>	<b>0</b>	<b>0</b>	<b>3</b>	<b>100</b>

## **OBJECTIVES**

- To introduce the concepts, principles, tools and aids of Road Safety and Civic Sense to the students of B.Arch.
- To acquaint them with the design and safety standards for roads. Also inculcate the practice of safe road behavior and civic sense among them.

## **UNIT I INTRODUCTION TO ROAD SAFETY**

**9Hrs**

Road as an active space, Types of Users, User Behavior, Sensory Factors like Vision and Hearing in User Behavior. Types of Vehicles: Heavy Vehicles, Light Motor Vehicle, Two Wheelers, Auto-Rickshaw, Bicycles and Cycle Rickshaw, Non-Motorized Vehicles. Vehicle Characteristics: Dimensions, Weight, Turning Radii, Braking Distance, Lighting System, Tiers, etc. Type of Hazards: Conflicts and Accidents.

## **UNIT II TYPOLOGY OF ROADS: COMPONENTS AND DESIGN AND INTERSECTIONS**

**9Hrs**

Road Classification; Urban Road Classification: Speed Limits of the Road types. Design of Roads; Spatial Standards for the Cross-Section Design. Relationship between Road Design and Road Safety. Types of Road Intersections: Grade Separated Junctions (with or without interchange): Three-Leg, Four-Leg, Multi-Leg, etc.

Design of Intersections: Design and Spatial Standards for Traffic slands. Turns, Turning Radii, Directional Lanes, Pedestrian Crossings, Median Openings, Traffic Calming Components like Speed Breakers and Table-Top Crossings etc. Design Considerations for Diverging, Merging, and Weaving Traffic. Location and Design for Traffic Signals.

## **UNIT III PEDESTRIAN CIRCULATION AND BARRIER FREE DESIGN**

**9Hrs**

Requirement of Pedestrian Infrastructure: Sidewalks and Footpaths, Recommended Sidewalk Widths, Pedestrian Crossings, Pedestrian Bridges, Subways, Cycle Tracks, etc. Barrier Free Design: Location and Design Standards for Ramps for Wheel Chair Access, Other Provisions like Tactile for Visually Challenged etc. Safety Provisions: Pedestrian Railings, Anti-skid Flooring, Pedestrian Signal, Walk Button, etc.

## **UNIT IV TRAFFIC SIGNS, SIGNALS, ROAD MARKINGS AND TRAFFIC CONTROL AIDS**

**9Hrs**

Type for Traffic Signs: Location, Height and Maintenance of Traffic Signs. Types of Road Markings Material, Color and Typography of the Markings. Traffic Signals: Introduction, Advantages, and Disadvantages. Traffic Control Aids: Roadway Delineators (Curved and Straight Sections), Hazard Markers, Object Markers, Speed Breakers, Table Top Crossings, Rumble Strips, Guard Rails, Crash Barriers etc. Street Lighting: Need for Street Lighting, Type of Lighting, Illumination Standard, Location and Intermediate Distance.

## **UNIT V ROAD SAFETY AND CIVICSENSE**

**9Hrs**

Need for Road Safety, Category of Road Users and Road Safety Suggestions. Traffic Management Measures and their influence in Accident Prevention.

Precautions for Driving in Difficult Conditions Types of Break downs and Mechanical Failures. Accident Sign Warning Light, Warning Triangle, etc.

Introduction to Concept of Civic Sense and its relationship to Road Safety: Importance of Civic Sense, Road Etiquette and Road User Behavior, Rules of Road, Right of the Way. Providing Assistance to Accident Victim. Sensitization against Road Rage.

### **OUTCOMES:**

**CO1:** The students after completion of this course will have an indepth knowledge in Traffic Engineering, Transport Planning, Highway Design and Construction, Sustainable Urban and Transport Development and will be efficient enough to take up projects in the field.

**CO2:** As the students have a hands-on experience in working with the Software, live projects, field visits to various organizations and training sessions during the course of study, they will be full-fledged Transport and Highway Planner.

### **TEXTBOOKS:**

- Introduction toTraffic Engineering, R Srinivasa Kumar
- Traffic Engineering and Transport Planning, L R Kadiyali
- Bookon Road Safety Signage and Signs,Ministry of Road Transport and Highways, Government of India
- MORT&HPocketbookforHighwayEngineers,2019 (Third Revision)
- Publications by UTTIPEC namely, Street Design Guidelines, UTTIPEC Guideline for Road Markings, UTTIPEC Guideline and Specification for Crash Barriers, Pedestrian Railing and dividers, UTTIPEC Standard Typical Crossing Design
- Street Design Standards as provided in Times Savers, Neuferts etc.
- PublicationsbyIndianRoadCongress.

AART3138	EARTHQUAKE RESISTANT ARCHITECTURE	L	T	P/S	C	Total Marks
		3	0	0	3	100

**OBJECTIVE:**

- To enable an understanding of the fundamentals of earthquake and the basic terminologies.
- To give basic knowledge of earthquake resistant design concepts.
- To provide familiarity with design codes and building configuration
- To enable understanding of the different types of construction details to be adopted in aseismic prone area.
- To give knowledge for applying earthquake resistant principles in an architectural design project.

**UNIT - 1 FUNDAMENTALS OF EARTHQUAKES 7Hrs**

Earth's structure, seismic waves, plate tectonics theory, origin of continents, seismic zones in India. Predictability, intensity and measurement of earthquake. Basic terms- fault line, focus, epicenter, focal depth etc.

**UNIT - 2 SITE PLANNING PERFORMANCE OF GROUND AND BUILDINGS 10Hrs**

Historical experience, site selection and development. Earthquake effects on ground, soil rupture, liquefaction, landslides. Behaviour of different types of building structures, equipments, lifelines, collapse patterns. Behaviour of non-structural elements like services, fixtures in earthquake-prone zones

**UNIT - 3 SEISMIC DESIGN CODES AND BUILDING CONFIGURATION 10Hrs**

Seismic design code provisions. Introduction to Indian codes. Building configuration - scale of building, size, horizontal and vertical plane, building proportions, symmetry of building - torsion, re-entrant corners, irregularities in buildings like short storeys, short columns, etc.

**UNIT - 4 DIFFERENT TYPES OF CONSTRUCTION DETAILS 11Hrs**

Seismic design and detailing of masonry structures, wood structures, earthen structures. Seismic design and detailing of RC and steel buildings. Design of non-structural elements - architectural elements, water supply, drainage, electrical and mechanical components.

**UNIT - 5 URBAN PLANNING AND ARCHITECTURAL DESIGN 7Hrs**

Vulnerability of existing buildings, facilities planning, fires after earthquake, socio-economic impact after earthquakes. Conceptual design for earthquake resistance involving institutional masonry building with horizontal spread and height restriction, multistoried RC framed apartment/commercial building.

**Total: 45 Periods / Hours**

**COURSE OUTCOMES:**

On completion of the course, the student is expected to be able to

**CO1:** Ability to understand the formation and causes of earthquakes

**CO2:** An understanding of the factors to be considered in the design of buildings and services resist earthquakes.

**TEXTBOOKS:**

- 'Guidelines for earthquake resistant non-engineered construction', National Information centre of earthquake engineering (NICEE, IIT Kanpur, India), 2004.
- C.V.R Murthy, Andrew Charlson, 'Earthquake Design Concepts', NICEE, IIT Kanpur, 2006.
- Agarwal.P, 'Earthquake Resistant Design', Prentice Hall of India, 2006.

**REFERENCES:**

- Ian Davis, 'Safe Shelter within Unsafe Cities: Disaster Vulnerability and Rapid Urbanization', Open House International, UK, 1987
- 'Socio-economic developmental record'- Vol.12, No.1, 2005.

## PROFESSIONAL ELECTIVE II (III YEAR VII SEM)

AART4137	INTERIOR DESIGN	L	T	P/S	C	Total Marks
		3	0	0	3	100

### OBJECTIVES

- To provide familiarity with the characteristics of interior spaces and furniture across history.
- To introduce the profession of interior design and bring out its role.
- To inform about the various components of interior space and give an understanding of the design aspects involved in each.

### UNIT I INTERIOR SPACES AND FURNITURE ACROSS HISTORY 7Hrs

Outline of the characteristics of representative/ exemplary interior spaces, interior decoration and furniture in the Western world from the beginnings to twentieth century. Outline of characteristics of representative/ exemplary interior spaces, interior decoration and furniture in India across the ages, including living folk traditions.

### UNIT II THEORY TO INTERIOR DESIGN 12Hrs

1. INTERIOR SPACE - Definition of Geometric elements, transition of architectural & interior elements, shaping by structural / enclosure / environmental systems, Spatial forms & element relationships- floors, walls, ceiling, windows/ doors, stairs & ramps.
2. DESIGN PROCESS - Programming - analyze, Concept development-synthesis, Design decisions- evaluate, Implementation. Design Criteria-Function, economy, style & image. Human factors- Functional dimensions & personal space. Activity relationships- plan arrangements & strategies. Graphic representations.
3. DESIGN VOCABULARY - Perception of Form, Shape, Color, Texture, Light, Proportion, Scale, Balance, Harmony, Unity & variety, Rhythm, Emphasis ; relate to visual characteristics of objects & aesthetic quality of visual environments.

### UNIT III INTERIOR BUILDING ELEMENTS AND SYSTEM 9Hrs

Selection & manipulation of elements like Floors, Walls- forms/ articulation/ texture/ color, Ceilings- height/ scale/ forms/ lighting / acoustics, Windows-operation/ views/ day-lighting / natural ventilation / space planning, Doors-operations / space planning, Stairs & ramps. Design & integration of MEP systems with interior building spaces & elements - Mechanical systems like AC & fire suppression systems, Electrical lighting & switches, plumbing fittings & fixtures, furniture & interior landscaping

### UNIT IV COMPONENTS OF INTERIOR SPACE - I 9Hrs

Role of interior treatment and finishes in the experience of interior spaces. Outline of the design of components such as floors, ceilings, walls, partitions, window treatments and accessories based on parameters such as context, function, ambience, materials, properties, methods of construction, colour, texture. Study of representative examples.

### UNIT V COMPONENTS OF INTERIOR SPACE – II 8Hrs

Role of lighting in the experience of interior spaces. Outline of different types of interior lighting systems and fixtures based on their effects and suitability in different contexts. Study of representative examples. Role of landscaping in the experience of interior space. Outline of

interior landscaping elements such as rocks, plants, water, flowers, fountains, paving, artefacts. Their physical properties and effects on spaces. Study of representative examples.

**Total: 45 Periods / Hours**

## **OUTCOMES**

**CO1:** An understanding of interior design as an integral part of architecture and as an interdisciplinary and allied field related to architecture.

**CO2:** An overall exposure to the ways in which interior spaces can be enriched through the design of specific interior components.

## **TEXTBOOKS**

- Francis D.K.Ching, 'Interior Design Illustrated', John Wiley & Sons, 2012.
- Joseph DeChiara, Julius Panero, Martin Zelnik, 'Time Saver's Standards for Interior Design', McGraw-Hill Professional, 2001.

<b>AART4138</b>	<b>STRUCTURE AND ARCHITECTURE</b>	<b>L</b>	<b>T</b>	<b>P/S</b>	<b>C</b>	<b>Total Marks</b>
		<b>3</b>	<b>0</b>	<b>0</b>	<b>3</b>	<b>100</b>

## **OBJECTIVES**

- To outline the evolution of structural systems through history.
- To introduce concepts of structural design through works of architects/ engineers.
- To create understanding about the relationship between architectural expression/ form and structure.

### **UNIT I STRUCTURAL DESIGN IN THE PRE-INDUSTRIAL ERA 7Hrs**

Development of monolithic and rock cut structures. Trabeated construction, arcuate construction, vaults and flying buttresses. Tents and masted structures. Bridges through ancient and medieval history.

### **UNIT II STRUCTURAL DESIGN IN THE POST-INDUSTRIAL PERIOD 8Hrs**

Post Industrial modular construction of large span and suspension structures in steel and concrete - projects of Pier Luigi Nervi, Maillart, Candella, Buckminster Fuller and Eero Saarinen. Structure in Deconstructivism – Structure and aesthetics. Parametric/ digital processes and structure.

### **UNIT III CONTEMPORARY STRUCTURAL EXPRESSION THROUGH CASE STUDIES - I 9Hrs**

The select case studies would include KCR Terminal at Hung Hom, Hong Kong, B3 Offices in Stockley Park, Sainsbury Centre for Visual Art, Renault Centre and Swindon UK by Norman Foster and Standsted Airport Terminal, London, UK by Fosters/Arup British Pavilion EXPO1992, Seville, Spain and Waterloo International Terminal by Nicholas Grimshaw.

### **UNIT IV CONTEMPORARY STRUCTURAL EXPRESSION THROUGH CASE STUDIES – II 12Hrs**

The select case studies would include Inmos Microchip Factory, Centre Commercial St. Herbtain, PA Technology, Princeton and Fleetguard, Quimper UK by Richard Rogers Athens Olympic Stadium and Village, Bridges and Public Bus Stop in St. Gallen , Railway Station, Lyon, France and Stadelhofen Railway station, Zurich Schweiz by Santiago Calatrava Kansai International Airport, UNESCO Workshop, the Jean-Marie Tjibaou Cultural Center, Menil Museum, Thomson Optronics Factory, IBM Traveling Exhibition Pavilion, Columbus International Exposition, Genoa Italy and Lowara Officers, Montecchio Maggiore Italia by Renzo Piano Building Workshop. Contemporary examples with respect to parametric/ digital processes and innovative new materials.

### **UNIT V SEMINAR 9Hrs**

Seminar to present a study of architectural form and structural expression through select cases which will aid understanding of structural philosophy and analysis, building envelope and services and construction sequence.

**Total: 45 Periods / Hours**

## **OUTCOMES**

**CO1:** Familiarity with concepts of structural design and its influence on the functional and aesthetic domains of architectural design relating to historic and contemporary periods.

**CO2:** Understanding of architectural expression and its relation to form, structure and changing technology.

## **TEXTBOOKS**

- Shigeru Ban, McQuaid, Matilda, 'Engineering and Architecture: Building the Japan Pavilion', Phaidon Press Ltd, UK, 2008.
- 'Cox Architects'(The Millennium Series), Images Publishing Group, 2001.
- James B Harris, Kevin Li, 'Masted Structures in Architecture', Routledge,2012

## **REFERENCES**

- Patrizio Bertelli et al, 'Herzog & De Meuron: Prada Aoyama Tokyo', Fondazione Prada, 2004
- Christopher Beorkrem, 'Material Strategies in Digital Fabrication', Routledge, 2012
- Angus J. Macdonald, Structure and Architecture, Architectural Press, 2001.

AART5139	ARCHITECTURAL JOURNALISM AND PHOTOGRAPHY	L	T	P/S	C	Total Marks
		3	0	0	3	100

## OBJECTIVES

- To introduce general skills necessary for the practice of professional journalism.
- To introduce the fundamentals of writing, explain different strategies and their criticism.
- To give particular exposure to architectural journalism.
- To introduce photojournalism, bring out importance/ contributions of photography in the architectural profession and to help develop proficiency in modern photography techniques.

## UNIT I INTRODUCTION

9Hrs

Introduction to journalism, key concepts and objectives of journalism. Specialised journalism with emphasis on architectural journalism. Journalism skills: research, reporting, writing, editing, photography, columnists, public relationships, criticism. Issues such as copyright, public art policy, the arts and urban redevelopment. Introduction to local culture scene.

## UNIT II TECHNOLOGIES IN JOURNALS

9Hrs

Environment, social change, persuasion. Interviewing techniques, argument and debate as a technique in the investigation of social problems. Evidence, proof, refutation, persuasion. Training in argumentative speaking. Introduction to software needed in journalism and photography, video coverage, walk-through of buildings, production of contemporary architectural journalism. Understanding the individual demands in the context of newspapers, radio, film, and television.

## UNIT III CONTEMPORARY ARCHITECTURAL JOURNALISM

9Hrs

Role of the editor. Editing of articles, features and other stories. Editing for online newspaper and magazines. Text preparation, mode of presentation, standards and guidelines for documentation. Code of ethics. Basic knowledge on press laws, Press Council of India. Multimedia/ online journalism and digital developments.

## UNIT IV DISCUSSIONS AND ISSUES

9Hrs

Regional, national and international discussion forums. Changes in contemporary and historical design practices. Discussions on topics needed in an architectural journal and current issues. Types of journals. Works of key architectural journalists. Public discourse on the internet. Mass media and public opinion. Critique on selected pieces of journalism.

## UNIT V ARCHITECTURAL PHOTOGRAPHY

9Hrs

Introduction to architectural photography and role of the photographic image in the global world. Equipment - cameras and lenses. Techniques- film speed, exposure measurement, gray scale, photofinishing and editing digital images. Perspectives- single point, two- point, three- point and methods of correcting distortions. Lighting - external and interior.

**Total: 45 Periods / Hours**

## OUTCOMES

**CO1:** An ability to critically think and analyze about the effects of architecture on society as well as the tools to enable recording of the same.

## **TEXTBOOKS**

- Edward Jay Friedlander and John Lee, 'Feature Writing for Newspapers and Magazines', 4<sup>th</sup> edition, Longman, 2000.
- David Fuller & Patricia Waugh, eds., 'The Arts and Sciences of Criticism', Oxford: Oxford University Press, 1999.

AART5155	CHENNAI – EVOLUTION AND ARCHITECTURE	L	T	P/S	C	Total Marks
		3	0	0	3	100

### OBJECTIVES

- To give an overview of the historic evolution of Chennai city.
- To introduce its different and distinguishing characteristics including geography, topography, hydrology, ecology, demographics, economics, culture, politics, art, etc.,
- To give knowledge of the evolution of the architecture and urbanism of Chennai in the context of its history.
- To outline the current issues and characteristics of Chennai.

### UNIT - 1 PRE-COLONIAL CHENNAI REGION 9Hrs

Natural history and geography of Chennai region including its ecology, topography, rivers, coastal ecosystems, sea, estuary, wetlands, indigenous forests, lakes, tanks, flora and fauna. Pre-colonial history of Chennai region — Tamilagam, fishing hamlets, urban settlements, rural areas. Pallava architecture. Historic settlements such as Mylapore, Triplicane, West Mambalam.

### UNIT - 2 COLONIAL CHENNAI 9Hrs

Advent of colonial rule in Chennai and its politics. Trade, commerce, economics and education in the context of colonial rule. Colonialism and its modernity- urbanism, building typologies- educational institutions, stations, buildings for justice, law and civics, houses and housing. Architectural styles and their intent- Classical, Indo-Saracenic, indigenous, hybrid. Impact of colonialism on culture and cultural modernity.

### UNIT - 3 MODERN CHENNAI 9Hrs

Urbanisation in Chennai from late 19<sup>th</sup> century. Political and economic changes from late 19<sup>th</sup> century/ early 20<sup>th</sup> century in Chennai. City planning in early 20<sup>th</sup> century Chennai. Modernity in architecture- office buildings, concrete, Art Deco. Independence and city planning- Gandhi Nagar, Anna Nagar, etc., Modern architecture in Chennai. Urbanisation and Master plans in the 1970s. New typologies such as shopping and office complexes, apartment buildings, etc., The local and the global in late 20<sup>th</sup> century Chennai. Corresponding architecture of regionalism, postmodernism, material changes in buildings, etc.,

### UNIT - 4 URBAN CULTURE 9Hrs

Overview of demographics of Chennai today. Diversity and distinctness of Chennai's culture and corresponding expressions- art, religious festivals, literature, cuisine, dance, theatre, cinema, politics, geographic differences in culture within Chennai.

### UNIT - 5 URBAN ISSUES AND SOLUTIONS 9Hrs

Changes in 21<sup>st</sup> century Chennai- urbanisation, migration, globalisation, growth of IT, new industries and economic opportunities. Corresponding issues- urban poor and housing scenario, traffic issues, encroachment of water bodies and marshlands, waste management issues, etc., Solutions- mass transit, housing schemes, ecological restoration measures, etc.,

**Total: 45 Periods / Hours**

**COURSE OUTCOMES:**

On completion of the course, the student is expected to be able to

**CO1:** An understanding of the overview of the historic evolution of Chennai city and its urbanism.

**CO2:** Knowledge about different and distinguishing characteristics.

**CO3:** An overall exposure to the current issues and characteristics of Chennai.

**REQUIRED READING:**

## PROFESSIONAL ELECTIVE III (V YEAR IX SEM)

AART5140	CONTEMPORARY BUILDING MATERIALS	L	T	P/S	C	Total Marks
		3	0	0	3	100

### OBJECTIVES

- To introduce current materials and products in architecture that are eco-friendly, composite, durable, advanced, smart.
- To inform about innovations in materials and practices in building industry.
- To focus on materials and systems, their properties and connections, intrinsic relationship with structural systems and environmental performance.

### UNIT I INTRODUCTION

9Hrs

Introduction and need for ultra-performance materials in building design as a substitute to conventional materials. Newer application for special performance, thermal/ sound/ moisture protection, fitting, equipment and furnishing. Properties of contemporary materials – multidimensional, repurposed, recombinant, intelligent, interfacial, transformant, etc.

### UNIT II ADVANCED CONCRETE AND COMPOSITE REINFORCEMENT

10Hrs

Types of advanced concrete and its applications. Workability and mechanical properties, durability and reliability of advanced concrete materials. Bendable concrete, light transmitting concrete, translucent concrete, pervious concrete, eco-cement, etc., Introduction to manufacture, types, properties and performance of new reinforcement materials in concrete - Aramid fibres, bio-steel, carbon (Graphite) Fibres and fibre glass etc.

### UNIT III COMPOSITE MATERIALS

9Hrs

Types, terminology and classification of composite materials based on particle reinforced, fiber reinforced, structural and composite benefit in building construction. Composite materials manufacturing process. Use of composite materials namely Polymer Matrix Composites (PMCs) and Fibre- Reinforced Polymers (FRPs) along with cement, steel, aluminium, wood, glass, etc., for thermal insulation, fire protection, coating, painting and structural monitoring, etc.

### UNIT IV NANO-MATERIALS AND NANO-COMPOSITES

9Hrs

Definition, manufacture and types of nano materials. Properties, performance of nano materials in building construction, types and application of nano-materials like carbon, nanotubes etc., Nano composite used with cement, steel, aluminium, wood, glass for thermal insulation, fire protection, coating and painting and structural monitoring etc.. Nano technologies in building and construction.

### UNIT V DIGITAL AND TENSILE MATERIALS

8Hrs

Types of materials and its constitution, manufacturing and construction technology requirement for 3D printed building's structure and Extraterrestrial printed structures. Tensile fabric structure by digital printing. Translucent fabric, thin-film photovoltaics, texlon foil, PVC (poly vinyl chloride) coated polyester cloth and PTFE (poly tetra fluoro ethylene) (teflon) coated glass cloth.

**Total: 45 Periods / Hours**

## **OUTCOMES**

- CO1:** Exposure to the need and use of various contemporary materials in creating innovation and ultra-performance in building design.
- CO2:** An understanding of characteristics and performance of the newer materials in terms of detailing and application to the context.
- CO3:** Understand modern design philosophies in the evolution of innovative architectural forms and designs.
- CO4:** Improve their appreciation towards historical sources, precursors of Modernism and evolution of Contemporary Architecture.

## **TEXTBOOKS**

AART5141	GLASS ARCHITECTURE AND DESIGN	L	T	P/S	C	Total Marks
		3	0	0	3	100

## OBJECTIVES

- To introduce latest advances in the field of glass in architecture.
- To enable right selection and usage of right glass for appropriate purposes.
- To give understanding of use of glass in contemporary architecture as well as its role in green design and improving building performance.

### UNIT I GLASS AS BUILDING MATERIAL

9Hrs

Evolution & importance of glass in modern architecture. Applications of glass in buildings (façade/interior applications). Understanding the production & properties of glass. Value additions including coating technology (importance & necessity) and processing (tempering, heat strengthening, DGU, laminated, ceramic fritting). Types of Glass- mirror, lacquered, fire resistant. Modern glass with different applications. Glass for hospitals, green homes, airports, offices, other buildings. Glass and human safety compliances. Role of glass in fire safety considerations - Class E, EI & EW. Role of glass in acoustics. International standards & codal provisions.

### UNIT II GLASS AND GREEN ARCHITECTURE

9Hrs

Building Physics. Theory of electromagnetic radiation. Understanding of internal and external reflections. Day-lighting in Buildings - introduction and basic concepts (VLT). Solar Control and thermal insulation (SF, UV, SHGC). Need for green Buildings. Energy efficient buildings. Achieving energy efficiency using glass. Factors of energy efficient material selection. Performance parameters. Energy codes and green ratings - ECBC, IGBC, GRIHA. Approaches of energy efficiency - prescriptive method, trade off method. Accommodating passive architecture. Whole Building Simulation.

### UNIT III CASE STUDY

9Hrs

Case study of green building designed predominantly with energy efficient materials. Calculations involving basic factors in glass design. Optimization of Glass - for wastage reduction and standardisation of Design. Construction site/ green building visit report.

### UNIT IV DESIGN WORKSHOPS I

9Hrs

Analysing and creating building using interactive modelling. Analysing of sun path, solar exposure building orientation, daylight, acoustics, site shadow analysis.

### UNIT V DESIGN WORKSHOPS II

9Hrs

Analysis of thickness for safety, consideration of aesthetics, economy, optimisation and wastage, airconditioning load calculations and payback analysis.

**Total: 45 Periods / Hours**

## OUTCOMES

**CO1:** An understanding of glass and its potential in contemporary usage

**CO2:** An understanding of tools and software currently in practice with respect to the use of glass in buildings.

## **TEXTBOOKS**

- Christian Schittich, 'Glass Construction Manual', Birkhauser Basel, 2007.
- 'Architectural Glass Guide', Federation of Safety Glass, 2013.

<b>AART5142</b>	<b>STEEL ARCHITECTURE AND DESIGN</b>	<b>L</b>	<b>T</b>	<b>P/S</b>	<b>C</b>	<b>Total Marks</b>
		<b>3</b>	<b>0</b>	<b>0</b>	<b>3</b>	<b>100</b>

## **OBJECTIVES**

- To introduce the design potential of steel as a material in building construction and its inherent structural benefits.
- To inform about the various components of steel as structural and aesthetic design through case studies.
- To provide familiarity with the best practices of steel as a construction material.

### **UNIT I INTRODUCTION TO STEEL AS BUILDING MATERIAL 9Hrs**

Materiality of steel, structural properties of steel, advantages of steel in construction. History of metal in construction – Iron to Steel. Steel and tension. Industrialization and mass fabrication of steel. Casting of steel in historic and contemporary examples. Invention of hollow structural sections. Hot rolled steel shapes, various hollow structural sections.

### **UNIT II STEEL IN HIGH TECH MOVEMENT, CONTEMPORARY ARCHITECTURE 9Hrs**

Introduction to High Tech movement. Understanding of various typologies of high-tech movement – Extruded, Grid/Bay, Diagrids, arched/ curved structures, tensile. Advantages of diagrids over standard frames. Curved steel – creating curves in steel buildings, limitations in curving steel. Evolution of AESS (architecturally exposed structural steel) through High Tech movement.

### **UNIT III STRUCTURAL EXPRESSION OF STEEL 9Hrs**

Introduction to AESS (architecturally exposed structural steel), standard structural steel versus AESS. Factors that define AESS. Characteristics and categories of AESS. Connection types for AESS – bolted, welded and cast connections. Member types for AESS – Tubular and standard sections. Various steel frame design, basic connection strategies, basic understanding of steel floor systems, truss systems and braced systems.

### **UNIT IV SUSTAINABILITY, STEEL AND OTHER MATERIALS 9Hrs**

Introduction to steel as a sustainable material. Recycled, reuse and adaptive reuse of steel. Steel and glazing systems, support systems for glazing. Technical aspects of combining steel with glass. Various steel and glass envelope systems - curtain wall system, wind braced support systems, cablenet walls, spider steel connections with structural glass, simple and complex cable systems. Handling curves and lattice shell construction. Advanced framing system – Steel and Timber. Low carbon design strategies.

### **UNIT V FABRICATIONS, ERECTION AND IMPLICATIONS ON DESIGN 9Hrs**

Study on transformation of architectural design into fabricated elements. Study of process profile through case studies. Role of physical and digital models in fabrication. Steel in temporary/ exhibit buildings. Need for corrosion and fire protection. Various finishes and coating systems of steel. Detailed study on corrosion protection and fire protection systems. Transportation, site issues and erection on site. Erection of beams and columns. Effects of climate and weather on erections. Other issues relating to practical implication of design on site.

**Total: 45 Periods / Hours**

## **OUTCOMES**

**CO1:** An understanding of steel as a structural, functional and aesthetic material in design and construction practice.

## **TEXTBOOKS**

- Terrimeyer Buake, 'Architectural Design in Steel', SPON, 2004.
- Peter Silver et al, 'Structural Engineering for Architects', Laurence King, 2013.

## PROFESSIONAL ELECTIVE IV (V YEAR IX SEM)

AART5143	CONTEMPORARY PROCESS IN ARCHITECTURAL DESIGN	L	T	P/S	C	Total Marks
		3	0	0	3	100

### OBJECTIVES

- To introduce theories of media and its influence on the perception of space.
- To enable study of the various aspects of digital architecture and its exploration through emerging phenomena that relies on abstraction of ideas.
- To give understanding of the works of contemporary architects who have illustrated the influence of the digital media in architecture.

### UNIT I INTRODUCTION

9Hrs

Investigation of contemporary theories of media and their influence on the perception of space and architecture. Technology and art. Technology and architecture. Digital technology and architecture.

### UNIT II ASPECT OF DIGITAL ARCHITECTURE

9Hrs

Aspects of digital architecture. Design and computation. Difference between digital process and nondigital process. Architecture and cyberspace. Qualities of the new space. Issues of aesthetics and authorship of design. Increased Automatism and its influence.

### UNIT III CONTEMPORARY PROCESS

7Hrs

Emerging phenomena such as increasing formal and functional abstractions. Diagrams, diagrammatic reasoning, diagrams and design process. Animation and design. Digital hybrid.

### UNIT IV GEOMETRIES AND SURFACES

4Hrs

Fractal geometry. Shape grammar. Hyper surface. Liquid architecture. Responsive architecture.

### UNIT V CONTEMPORARY PROCESS AND ARCHITECTURAL WORKS

9Hrs

Ideas and works of architects related to contemporary processes. The architects to include Greg Lynn, Reiser + Umemotto, Lars Spuybroek / NOX Architects, UN studio, Diller Scofidio, Dominique Perrault, Decoi, Marcos Novak, Foreign Office Architects, Asymptote, Herzog and de Meuron, Neil Denari, Serie Architects, BIG Architects. Study to be undertaken in the form of assignments/discussions/seminars/presentations.

**Total: 45 Periods / Hours**

### OUTCOMES

**CO1:** An understanding of the effect of contemporary theories of media on contemporary architectural design.

**CO2:** Insight into contemporary design process/theories and their relation to computation.

**CO3:** Ability to understand specific aspects of contemporary processes appropriate to a design situation.

**CO4:** Familiarity with architectural works derived from contemporary processes.

AART5144	ENERGY EFFICIENT ARCHITECTURE	L	T	P/S	C	Total Marks
		3	0	0	3	100

## OBJECTIVES

- To inform about the need to use alternative sources of energy in view of the depleting resources and climate change.
- To provide familiarity with simple and passive design considerations.
- To inform about the importance of day lighting and natural ventilation in building design.
- To create awareness of future trends in the design of sustainable built environment.

### UNIT I PASSIVE DESIGN

9Hrs

Significance of energy efficiency in the contemporary context. Simple passive design considerations involving site conditions, building orientation, plan form and building envelope. Heat transfer and thermal performance of walls and roofs.

### UNIT II PASSIVE HEATING

9Hrs

Direct gain. Thermal storage of wall and roof. Roof radiation trap. Solarium. Isolated gain.

### UNIT III PASSIVE COOLING

9Hrs

Evaporative cooling. Nocturnal radiation cooling. Passive desiccant cooling. Induced ventilation. Earth sheltering. Wind tower. Earth air tunnels.

### UNIT IV DAY LIGHTING AND NATURAL VENTILATION

9Hrs

Daylight factor. Daylight analysis. Daylight and shading devices. Types of ventilation. Ventilation and building design.

#### SITE PLANNING AND DEVELOPMENTS

Land form - vegetation type and pattern - water bodies - open spaces and built spaces - urbanscape - design strategies.

### UNIT V CONTEMPORARY AND FUTURE TRENDS

9Hrs

Areas for innovation in improving energy efficiency such as photo voltaic cells, battery technology, thermal energy storage, recycled and reusable building materials, nanotechnology, smart materials, energy conservation building code – New Indian way for affordable and sustainable homes – Eco Niwas Samhita 2018.

**Total: 45 Periods / Hours**

## OUTCOMES

**CO1:** Knowledge of alternative sources of energy and passive design considerations.

**CO2:** An understanding of day lighting and natural ventilation in design.

**CO3:** Familiarity with future trends in creating sustainable built environment.

<b>AART5145</b>	<b>ARCHITECTURAL CONSERVATION</b>	<b>L</b>	<b>T</b>	<b>P/S</b>	<b>C</b>	<b>Total Marks</b>
		<b>3</b>	<b>0</b>	<b>0</b>	<b>3</b>	<b>100</b>

### **OBJECTIVES:**

- To introduce to student the meaning, types of conservation and distinguish between preservation and Adaptive re-use.
- To sensitize about the role of International Agencies involved in conservation and practices adopted in other developed countries.
- To introduce to students about the procedures documentation and measures adopted for historic building and precincts.
- To carry-out surveys, case-studies. With reference to specific historic buildings and precincts in India and the make students aware of the various planning tools

### **UNIT: I INTRODUCTION TO CONSERVATION**

**9Hrs**

Understanding Heritage. Type of Heritage. Heritage conservation - Need, Debate and purpose. Defining Conservation, Preservation and Adaptive reuse. Distinction between Architectural and Urban Conservation. International agencies like ICCROM, UNESCO and their role in Conservation.

### **UNIT: II CONSERVATION IN INDIA**

**10Hrs**

Museum conservation - monument conservation and the role of Archeological Survey of India - role of INTACH - Central and state government policies and legislations - inventories and projects - select case studies - craft Issues of conservation - conservation project management.

### **UNIT: III CONSERVATION PRACTICE**

**12Hrs**

Listing of monuments - documentation of historic structures - assessing architectural character - historic structure report - guidelines for preservation, rehabilitation and adaptive re-use of historic structures - seismic retrofit and disabled access / services additions to historic buildings - heritage site management.

### **UNIT: IV URBAN CONSERVATION**

**14Hrs**

Over view urban history of India and Tamil Nadu - Understanding the character and issues of historic cities - select case studies of towns like Shajahanabad, Alahabad, Bhuvanewar, Hyderabad, Mysore, Thanjavur, Kancheepuram etc., - Historic districts and heritage precincts - conservation as a planning tool - financial incentives and planning tools such as TDR, transferable development right - Urban conservation and heritage tourism.

**Total: 45 Periods / Hours**

### **OUTCOMES:**

**CO1:** Create an awareness about the historic legacy and architectural heritage of India.

**CO2:** Students learn the appropriate methodologies and tools for recording, documentation and inventorying of heritage structures.

**CO3:** To acquire skills for documentation photography, surveys, research etc.

**CO4:** Critically evaluates and make assessment of heritage components.

**CO5:** Sensitize about the role of International Agencies involved in conservation and practices adopted in other developed countries. • Student's gets awareness on the various planning tools involved.

**TEXTBOOKS:**

## PROFESSIONAL ELECTIVE V (V YEAR IX SEM)

AART5146	ADVANCED STRUCTURES	L	T	P/S	C	Total Marks
		3	0	0	3	100

### OBJECTIVES

- To give an understanding of the loss of pre- stress and design requirements for determinate beams.
- To provide familiarity with the concept of industrial structures and high-rise structures.
- To enable the study of concepts of tensile structures, domes, shells and folded plates.

### UNIT I PRESTRESSED CONCRETE

9Hrs

Losses of Prestress. Design requirements. Design of determinate beams.

### UNIT II INDUSTRIAL STRUCTURES

9Hrs

Classification, planning and layout requirements, functional requirements. Types of industrial structures- power plants, bunkers and silos, cooling towers, containment structures, chimneys. Merits.

### UNIT III HIGH-RISE BUILDINGS

9Hrs

Introduction. Load action in high rise buildings. Various structural systems. Waffle slab. Approximate analysis of frames for gravity and horizontal loadings.

### UNIT IV TENSILE STRUCTURES

9Hrs

Concept, development, laws of formation, merits and demerits of pneumatic structures. Basic principles, forms, merits and demerits of cable structures.

### UNIT V SHELLS, DOMES AND FOLDED PLATES

9Hrs

Shells of translation. Shells of revolution. Classification of shells and different forms. Domes. Types of folded plates. Space frames.

**Total: 45 Periods / Hours**

### OUTCOMES

**CO1:** An understanding of concepts and applications of pre-stressed concrete.

**CO2:** An understanding of concepts and application of industrial structures and sky scrapers.

**CO3:** Familiarity with the theory and applications of tensile structures, grids, domes, shells and folded plates.

### REQUIRED READING

<b>AART5147</b>	<b>SUSTAINABLE ARCHITECTURE AND PLANNING</b>	<b>L</b>	<b>T</b>	<b>P/S</b>	<b>C</b>	<b>Total Marks</b>
		<b>3</b>	<b>0</b>	<b>0</b>	<b>3</b>	<b>100</b>

## **OBJECTIVES**

- To give an understanding of the concept of sustainability and sustainable development.
- To inform about issues like climate change, ecological footprint, etc.
- To provide familiarity with low impact construction practices, life cycle costs and alternative energy resources.
- To give exposure to the different rating systems for building practices with case studies.
- To enable understanding of the concept of sustainable communities and associated socioeconomic dimensions through case studies.

### **UNIT I INTRODUCTION TO SUSTAINABILITY**

**9Hrs**

Concept of sustainability. Carrying capacity, sustainable development. Bruntland report. Ethics and visions of sustainability. Circles of sustainability. Sustainable economy and use. eco systems, food chain and natural cycles or cradle to cradle concept.

### **UNIT II CLIMATE CHANGE AND SUSTAINABILITY**

**9Hrs**

Overview of climate change and its impact on a global and regional scale. Principles of energy systems. Energy crisis and global environment. Study on vernacular techniques and technological advancements in climate control in different climatic zones.

### **UNIT III SITE AND SUSTAINABILITY**

**9Hrs**

Sustainable site selection and development. Introduction to Green building concepts. TERI, LEED, GIRHA and BREEAM. Ecology and sustainability. Different sources of energy, recyclable products and embodied energy.

### **UNIT IV SUSTAINABLE MATERIALS**

**9Hrs**

Selection of materials Eco building materials and construction. Low impact construction – bio mimicry, zero energy buildings, nano technology and smart materials.

### **UNIT V SUSTAINABLE CITIES**

**9Hrs**

Dimensions of sustainable community- social, cultural and economic factors. Urban ecology, urban heat island effects, smog etc. Case studies of eco city or communities.

**Total: 45 Periods / Hours**

## **OUTCOMES**

**CO1:** An understanding of the concepts of ecosystem, carrying capacity, ecological footprint, sustainability and sustainable development.

**CO2:** Awareness of emerging vulnerabilities of global warming and climate change and an understanding of the contribution of building industry towards the same.

**CO3:** Familiarity with approaches to achieving sustainable buildings and communities.

**CO4:** Knowledge of incentives and evaluation systems for green buildings.

## **TEXTBOOKS**

<b>AART5148</b>	<b>LANDSCAPE ARCHITECTURE</b>	<b>L</b>	<b>T</b>	<b>P/S</b>	<b>C</b>	<b>Total Marks</b>
		<b>3</b>	<b>0</b>	<b>0</b>	<b>3</b>	<b>100</b>

## OBJECTIVES

- To introduce the different ways in which humans have shaped and designed landscapes across history and region in terms of need, culture and experience.
- To give an overview of ecological balance and impacts of human activities today and stress on the role and scope of landscape design in sustainability and environmental conservation.
- To provide familiarity with the various elements and principles of landscape design and its contribution to human built environment.
- To introduce analytical, artistic and technical aspects involved in site planning, open space and outdoor design.

### UNIT - 1 LANDSCAPES IN HISTORY

**10Hrs**

Human civilizations and attitude to nature and landscapes across history and cultures. Outline of Japanese, Italian Renaissance and English gardens. Outline of landscape and garden design in Indian history. Gardens depicted in Sanskrit literature, Nandavanams and residential gardens of South India. Moghul gardens. Public parks and residential gardens of the colonial period. Contemporary public landscape projects. Study of notable examples. Spatial development in landscape design.

### UNIT - 2 BASICS OF ECOLOGY

**7Hrs**

Introduction to landscape architecture as a discipline and field. Basic concepts of ecology and the impact of human activities on them. Bio, Geo, chemical cycles including water cycle, carrying capacity of an ecosystem. Environmental impact assessment. Reclamation and restoration of derelict lands

### UNIT - 3 ELEMENTS IN LANDSCAPE DESIGN

**10Hrs**

Introduction to hard and soft landscape elements. Different types of hard landscape elements. Plant materials, water and landform - classification, characteristics, use and application in landscape design.

### UNIT - 4 SITE PLANNING

**10Hrs**

Organization of spaces in the outdoor environment. Role of circulation and built form in shaping the environment. Role of landscape design in design of neighborhood parks, children's play area and campus development.

### UNIT - 5 LANDSCAPING AND FUNCTIONAL AREAS

**8Hrs**

Urban open spaces and principle of urban landscape. Street landscaping, landscape design for waterfront areas and functional areas in urban centres. Green infrastructure including green roofs and walls.

**Total: 45 Periods / Hours**

## OUTCOMES:

On completion of the course, the student is expected to be able to

**CO1:** An understanding of reasons for evolution of landscapes across time and context.

**CO2:** Ability to discern the role of natural and human actions with respect to macro scale of sustainability and ecology as well as in the micro scale of shaping of outdoor environments.

**CO3:** Knowledge about the elements of landscape design and their scope.

**CO4:** An understanding of landscape design with respect to site planning and different functional typologies of spaces.

**TEXTBOOKS:**

AART5152	ARTIFICIAL INTELLIGENCE IN DESIGN PROCESS	L	T	P/S	C	Total Marks
		3	0	0	3	100

## OBJECTIVES

- To give knowledge and understanding about the discipline of Artificial Intelligence as a totality and its potential in Architectural Design.
- To give understanding about the relationship between architecture and computing within methodological design process.

### UNIT INTRODUCTION TO AI 9Hrs

Introduction to Artificial Intelligence; Introduction to Internet of Things (IoT), Big Data, Machine Learning (ML), Block Chain, Etc.,

### UNIT II CYBERNETICS & MACHINES 9Hrs

Definition of Cybernetics; Cybernetic architecture; Cyberspace; Virtual-Reality; The Architectural Relevance of Cybernetics;

### UNIT III DESIGN INTELLIGENCE SYSTEM 9Hrs

Algorithm in Architecture; Data driven/informed process; Multi-Agent Design System; Automation in Design; Swarm Intelligence, Neural Networks, Morphogenetic, Self-Organising, Behavioural; Evolutionary and cognitive aspects;

### UNIT IV CONSTRUCTION INTELLIGENCE SYSTEM 9Hrs

Robotic construction, 4d Printer, Real-time Fabrication, Virtual/Augmented Reality, Flying Robots; Human-free construction process.

### UNIT V STUDENT SEMINAR 9Hrs

Application of AI in Architectural Projects/by Architects: Zaha Hadid Architects (ZHA), Foster + Partners, Buro Happold, Arup Group, Matias Del Campo, Sidewalk Labs/Delve, Regen Villages, Phil Bernstein, etc.,

**Total: 45 Periods / Hours**

## OUTCOMES

**CO1:** Knowledge about artificial intelligence as a domain.

**CO2:** Familiarity with artificial intelligence in architectural design process.

**CO3:** Exposure to various intelligence design processes and new trans-disciplinary design methodologies.

## TEXTBOOKS:

- Architecture in the Age of Artificial Intelligence: An Introduction to AI for Architects, Neil Leach, Bloomsbury Visual Arts.

## PROFESSIONAL ELECTIVE VI (V YEAR X SEM).

AART5149	VISUAL COMMUNICATION & ARCHITECTURE	L	T	P/S	C	Total Marks
		3	0	0	3	100

### OBJECTIVES:

- Learn the need and importance of visual communication and theories and philosophies related to it.
- Learn the elements of design, materials, techniques and tools of graphic design.
- Learn the way finding in built environment and outdoor using advanced computer applications.
- Learn Digital sculpture and installation for special need, Biomechanics, Psychological aspects.
- Learn various techniques behind architectural photography

### UNIT I INTRODUCTION TO VISUAL COMMUNICATION

4 Hrs.

Need for and the Importance of Human and Visual Communication. Communication an expression, skill and process. Relation between visual communication and architecture. Theories and Philosophies of Visual Communication.

### UNIT II GRAPHIC DESIGN

6 Hrs.

Basics of Graphic Design. Definition, Elements of GD, Design process-research, a source of concept, the process of developing ideas-verbal, visual, combination & thematic, visual thinking. Problem associated with editing and manipulation of image/pictures using PhotoShop/Corel Draw. Associative techniques, materials, tools (precision instruments etc.) design execution, and presentation.

### UNIT III WAY FINDING IN ARCHITECTURE

8 Hrs.

Basics of Way finding in complex built environments. Study of semiotic theory. Study of signs and signages and their application in built environment. Use of advanced computer applications such as mobile augmented reality and RFID tagging in process of way finding in indoor environment. Use of GPRS and GPS for way finding in outdoor environment.

### UNIT IV INSTALLATION ART AND ARCHITECTURE

5 Hrs.

Introduction to Digital sculpture and installation art and their association to architecture. Integration of Open spaces and public spaces with installations. Study of works of Contemporary Installation artist. Conceptual design of Installation for place architecture. 92

### UNIT V ARCHITECTURAL PHOTOGRAPHY

7 Hrs.

Human Eye and Camera. Basics of Camera and its operations. Types of Cameras. Visual Perception. Perception of Color, depth, lighting, foreground, mid ground, and background in architectural photography. Visual Documentation of Architectural projects. Image processing, Editing/Post production. Preparation of portfolio.

**Total: 45 Periods / Hours**

## **OUTCOMES**

**CO1:** Understanding visual design principles, creating different drawing types like axonometric and perspective drawings with shading, mastering technical skills such as dimensioning, and applying architectural conventions to portray designs effectively.

**CO2:** Students will also learn how to research and communicate design ideas, evaluate and critique designs, and use software for 2D and 3D image creation to meet project goals and audience needs.

## **TEXT BOOKS**

<b>AART5150</b>	<b>CONSTRUCTION AND PROJECT MANAGEMENT</b>	<b>L</b>	<b>T</b>	<b>P/S</b>	<b>C</b>	<b>Total Marks</b>
		<b>3</b>	<b>0</b>	<b>0</b>	<b>3</b>	<b>100</b>

## OBJECTIVES

- To introduce different management techniques suitable for planning and construction projects.
- To enable understanding of management systems for accomplishing the task efficiently in terms of quality, time and cost.

### UNIT I INTRODUCTION TO PROJECT MANAGEMENT 9Hrs

Project management concepts. Objectives, planning, scheduling. Controlling and role of decision. In project management. Traditional management system. Gantt's approach. Load chart. Progress chart. Development of bar chart, merits and demerits. CPM networks, merits and demerits. PERT network. Introduction to the theory of probability and statistics.

### UNIT II PROJECT PROGRAMMING AND CRITICAL PATH METHOD 9Hrs

Project network. Events activity. Dummy. Network rules. Graphical guidelines for Network. Numbering the events. Cycles. Development of network-planning for network construction. Models of network construction. Steps in development of network. Work breaks down structure. Hierarchies. Critical path method - process, activity time estimate, earliest event time, latest allowable occurrence time, start and finish time of activity, float, critical activity and critical path problems.

### UNIT III RESOURCE PLANNING 9Hrs

Cost model- project cost, direct cost, indirect cost, slope curve, total project cost. Optimum duration contracting the network for cost optimization. Steps in cost optimization, updating, resource allocation, resource smoothing, resource leveling.

### UNIT IV COMPUTERIZED PROJECT MANAGEMENT 9Hrs

Creating a new project, building task. Creating resources and assessing costs, refining project. Project tracking, recording actual. Reporting on progress. Analyzing financial progress. Introduction to BIM.

### UNIT V CONCEPT TO COMMISSIONING 9Hrs

Project feasibility study. Real estate & regulatory strategies. Facility programming and planning. Design management. EPC. testing & commissioning.

**Total: 45 Periods / Hours**

## OUTCOMES

- CO1:** Ability to understand a project from concept to commissioning, feasibility study & facility programme, design, construction to commissioning.
- CO2:** Ability to apply project management techniques in achieving objectives of a project like client needs, quality, time & cost.
- CO3:** An understanding of principles of management, construction scheduling, scope definition and team roles.

## **TEXTBOOKS**

- Dr. B.C. Punmia and K.K. Khandelwal, 'Project Planning and Control with PERT and CPM', Laxmi Publications, 2018.
- Elaine Marmel, 'Microsoft Project 2010 Bible', Wiley, 2010.
- Sam Kubba, 'Green Construction Project Management and Cost Oversight', Elsevier, 2010.

## **REFERENCES**

<b>AART5151</b>	<b>DISASTER MANAGEMENT</b>	<b>L</b>	<b>T</b>	<b>P/S</b>	<b>C</b>	<b>Total Marks</b>
		<b>3</b>	<b>0</b>	<b>0</b>	<b>3</b>	<b>100</b>

## **OBJECTIVES**

- To understand the causes and effects of natural calamities.
- To familiarize with the factors causing disaster.
- To create an overall understanding of Disaster prevention and mitigation.
- To outline the concepts of disaster resistant construction.
- To expose the students to Case studies of Natural disasters in India.

### **UNIT- 1 NATURAL HAZARDS AND DISASTER MANAGEMENT 9Hrs**

Understanding the Concepts and definitions of Disaster, Hazard, Vulnerability, Risk, Capacity –Disaster and Development, Disaster management and Disaster Management cycle. Understanding the Causes and effects of natural calamities - floods, tropical cyclones, landslides, heatwaves & Tsunami. Institutional and Financial Mechanism National Policy on Disaster Management, National Guidelines and Plans on Disaster Management; Role of Government (local, state and national), Non-Government and Inter-Governmental Agencies

### **UNIT- 2 ELEMENTARY SEISMOLOGY 9Hrs**

Major Historic Earthquakes in the World, earthquake hazard map of India, Causes of Earthquakes: Elastic Rebound theory, Continental Drift and Plate Tectonics, Types of Plate Boundaries, types of faults, seismic waves – classification of body waves and surface waves, magnitude, intensity, epicenter and energy release, Terminologies and Definitions and types of earthquake based on location, size and focal depth characteristics of strong earthquake ground motions, Flexibility of long & short period structures; concepts of response spectrum, Seismological Instruments: Seismograph and Accelerograph, Introduction to Seismic zones, Need for Seismic Zonation, Types of Zonation and Seismic zonation scales

### **UNIT- 3 LESSONS LEARNT FROM PAST EARTHQUAKES & SEISMIC DESIGN**

#### **PRINCIPLES 9Hrs**

Earthquake Effects: - On ground, soil rupture, liquefaction and landslides, Behaviors of various types of buildings, lifelines and collapse patterns, Behaviour of Non-Structural Elements like services, fixtures, mountings etc., Social & Economic Consequences of earthquakes. Concept of seismic design, stiffness, strength, period, ductility, damping, hysteric energy dissipation, center of mass, center of rigidity, torsion, design eccentricities, Seismic effects related to building configuration. Plan & vertical irregularities, Special Aspects: - Torsion, appendages, staircases, adjacency, pounding. Ductility based design: Design of energy absorbing devices, Seismic base isolation and seismic active control.

### **UNIT- 4 STRUCTURAL DETAILING & EARTHQUAKE RESISTANT**

#### **CONSTRUCTION**

#### **DETAILS 9Hrs**

IS Code provisions for the buildings: - IS:1893-2002, IS:4326-1993 Horiz. & vert.seismic co-efficients, valuation of base shear, distribution of shear forces in multistorey buildings. Seismic Detailing of Masonry buildings (IS: 4326), Seismic Designs & Detailing of RC & Steel Buildings: IS: 1893 - 2002; IS: 13920 - 1993; IS: 456 - 2000; IS: 800 - 2004.

Special reinforcing and connection details in structural drawings. Various Types and construction details of Foundations, soil stabilization, retaining walls, plinth fill, flooring, walls, openings, roofs, terraces, parapets, boundary walls, underground and overhead tanks, staircases and isolation of structures. Local practices: traditional regional responses.

#### **UNIT- 5 CASE STUDIES AND DESIGN GUIDELINES**

**9Hrs**

Earthquakes at Bhuj, Latur, etc., Cyclones in coastal Andhra Pradesh & Orissa, Landslides in Nilgiris, Himachal etc, Floods in Bangladesh, and Droughts in Rajasthan & Tsunami in Tamil Nadu. Design guidelines for disaster resistant construction at appropriate situations - Engineering, architectural, landscape & planning solutions for floods, tropical cyclones & Tsunami.

**Total: 45 Periods / Hours**

#### **OUTCOMES**

**CO1:** To create awareness about natural disasters and factors that causes them to foster knowledge about strategies for disaster management and mitigation.

**CO2:** Understanding the design guidelines in disaster resistant construction. To familiarize the students with Case studies of natural disasters in India.
